Foreword

It is with great pleasure that we present an updated edition of the Sweden-Bangladesh Business Guide 2024-2025. Since the publication of our Jubilee Edition in 2022, at the 50 years hallmark of our bilateral relations, Bangladesh has kept showcasing its potential as a globally competitive business destination. The Economist Intelligence Unit has forecasted Bangladesh to be among the top 20 global economies by 2040 based on market size, economic growth, and the potential of booming sectors, and HSBC Global Research has projected the country to be the ninth largest consumer market globally by 2030. The 2024-25 version of our Guide comes at another milestone, as Bangladesh is set to graduate from the Least Developed Country (LDC) status in 2026.

Bangladesh is a growing trade partner for Sweden in South Asia. Not only is it recognised as one of the world's fastest growing economies, being a strategically located and a cost-competitive alternative in the Asia-Pacific region, but it also offers a substantive domestic market with a growing middle-class. A growing urban population and a tech-savvy young workforce naturally creates a growing market base for Swedish cutting-edge solutions. As the Bay of Bengal emerges as a

significant part of the Indo-Pacific region, Sweden looks forward to enhancing our trade dynamics with Bangladesh.

Despite global uncertainties, Bangladesh has kept attracting increasing interest as a potential key market for innovative global products and services. Be it in areas of renewable energy and energy efficiency, sustainable sourcing and textiles, waste management and circularity, water conservation, digitalisation, urban planning, and smart cities, Swedish companies are well-placed and have an unparallel resource-pool, product-line, and service-package to continue supporting Bangladesh's path towards sustainable economic growth. We are confident that the domain of sustainability will remain an overarching priority in the bilateral relations between our two nations, and will help develop synergies between development and trade, as well as promoting a green and digital transition.

We hope that this Business Guide will be of help to both Swedish and Bangladeshi companies, seeking to take bilateral trade forward in the spirit of partnership, cooperation and mutual sustainable development.

Alexandra Berg von Linde
Ambassador of Sweden to
Bangladesh

SUPPORTING ORGANISATIONS

Embassy of Sweden, Dhaka

The Embassy of Sweden in Dhaka represents the Swedish Government in Bangladesh and is responsible for strengthening bilateral relations between the two countries in a range of different areas. The Embassy has a mission to promote political contacts, support Swedish trade and investments and work with development cooperation in and with Bangladesh. It is responsible for promoting cultural exchange, people-to-people contacts and spreading information about Sweden in Bangladesh. The Embassy also provides consular support to Swedish citizens and issues visas and permits for Bangladeshis and third country citizens.

Within the area of trade and economic cooperation, the Embassy promotes the interests of the Swedish business community present in Bangladesh and works to support an improved business climate for Swedish companies. It also supports individual Swedish companies in select business related matters and can give initial guidance to Swedish companies looking to establish themselves in Bangladesh.

Business Sweden – The Swedish Trade & Invest Council

Business Sweden helps Swedish companies grow global sales and international companies invest and expand in Sweden. With a unique mandate from the Swedish government and the business sector, we offer strategic advice and practical support in more than 40 markets worldwide.

Our mission is to help lay the foundation for sustainable, inclusive, and digital growth – in Sweden and around the world. We do this by providing startups, small and medium-sized companies and multinationals with tailored services, coupled with access to key stakeholders in the public and private spheres.

Our team in India helps companies capture opportunities and succeed across South Asia and puts Sweden's industries in the spotlight for local investors and collaborations. We have the knowledge and global perspectives to help your company build relationships, accelerate time-to-market, and comply with local standards and regulations.

We work closely with Team Sweden partners including Swedish Consulates in Chennai, Kolkata & Mumbai through the Swedish Embassies and Consulates in Afghanistan, Bangladesh, Bhutan, Maldives, Nepal, Sri Lanka and Pakistan in a wide range of promotion activities. Do you have a project in mind or need support on the ground in Bangladesh? Contact us today:

EKN - The Swedish Export Credits Guarantee Board

EKN is a government export credit agency with the task of promoting exports and developing the internationalisation of Swedish business and industry. They do so by insuring export companies and banks against the risk of non-payment in export transactions, thereby enabling them to conduct more secure export transactions. A guarantee from EKN facilitates financing of a purchase of Swedish goods and services. With the guarantee, a supplier can offer better credit terms to customers. EKN's services provide an additional level of confidence to any international venture with strong benefits for all parties in a transaction.

EKN's activities encompass export transactions in 140 countries yearly and the companies we help range from small companies to large groups. EKN has existed since 1933, and has a broad network which includes banks, Swedish companies and EKN's counterparts in other countries and other export-promoting organisations.

Swedfund

Swedfund International AB

Swedfund is Sweden's development finance institution with the mission to contribute to poverty reduction through sustainable investments in developing countries. Swedfund is fully owned by the Swedish state and managed by the Ministry of Finance. It is financed through annual capital injections from the Ministry for Foreign Affairs as well as from portfolio reflows. Swedfund is one of 15 members of the Association of European Development Finance Institutions (EDFI).

Swedfund invests equity, provides loans, or uses the fund instrument in four focus sectors: Energy & Climate, Financial inclusion, Sustainable enterprises, and Food systems. The investments contribute to the creation of jobs with decent labor conditions and increase access to essential products and services such as electricity and digital connection. Swedfund can also use technical feasibility studies, the Project Accelerator, early in the investment cycle to enable the development of more sustainable and bankable projects in the public sector.

At the end of 2023, Swedfund had 73 portfolio companies. The majority of the portfolio is in sub-Saharan Africa, however, Swedfund also has several investments in Asia and Eastern Europe.

SEK - Swedish Export Credit Corporation

Swedish Export Credit Corporation (SEK) is a state-owned company that finances Swedish exporters, their suppliers and international buyers. The company's mission is to ensure access to financial solutions on commercial and sustainable terms. Since 1962, SEK has offered loans that have enabled thousands of Swedish companies to grow by increasing production, making acquisitions, increasing the number of employees and selling products and services to clients across the globe. SEK's ambition is to be a positive force in the climate transition taking place in Sweden and internationally.

SEK has long-standing experience of international funding. With lending in 60 countries, SEK strengthens the competitiveness of the Swedish export industry and contributes to a more sustainable world.

Mr. Magnus Montan, CEO

Embassy of the People's Republic of Bangladesh, Stockholm

The Embassy of the People's Republic of Bangladesh in Stockholm is working for the promotion of business, trade and investment between Bangladesh and Sweden. The Embassy facilitates information on business and investment issues, arranges meetings for businessmen and companies from both countries, issues business and other visas and provides necessary support to explore business and investment. Apart from Sweden, the Embassy is also accredited to Norway and Finland.

Bangladesh has an excellent trade relation with these countries. Trade and investments have developed in a positive way, albeit from a low level. The steady growth in bilateral trade is a manifestation of that. There exists tremendous potential to enhance the trade and investment relations in fields of textile, pharmaceuticals, ceramic, shipbuilding, IT, green technology, green energy, leather, handicrafts and so on.

The Federation of Bangladesh Chambers of Commerce and Industry

The Federation of Bangladesh Chambers of Commerce and Industry (FBCCI), established in 1973, is the exclusive umbrella trade organisation of Bangladesh representing MSMEs to the largest sectors of the country. Their current members are 500+ trade bodies including 86 district chambers, 404 trade and industrial sectoral associations, 14 women chambers, 3 women associations, 20 bilateral chambers in addition to corporate members from MSMEs to large enterprises and associate members of international trade organisations.

The chamber closely works with policymakers and stakeholders at national and international platforms on policy advocacy, trade facilitation, investment promotion, skills etc. FBCCI's international engagements are with 132 global strategic partner organisations. FBCCI's Impact 4.0 initiative 2020 takes a 360° approach to their engagements in social, culture, sports, education and philanthropic initiatives in addition to their advocacy role.

Mr. Mahbubul Alam, President

Dhaka Chamber of Commerce & Industry

Dhaka Chamber of Commerce & Industry (DCCI) is one of the largest Chambers in Bangladesh with over 4,500 members from SMEs to large businesses.

For the last six decades DCCI has promoted private sector in the country. During 1980s, DCCI spearheaded the banking and insurance sector privatisation reform process. In the late 1990s, DCCI played an important role towards opening up the mobile telecommunication sector for increased private investment. From 2000 onwards, DCCI has been playing important roles in various business initiatives including policy reforms, simplification of taxation systems, cross-border trade, trade facilitation, public-private platforms for improved policy design, trade reforms for conducive investment climate and improvement of the overall business eco-system of Bangladesh.

Mr. Ashraf Ahmed, President

Nordic Chamber of Commerce and Industry in Bangladesh

The Nordic Chamber of Commerce and Industry (NCCI) in Bangladesh was founded in 2010 as a joint initiative of the Nordic companies and Embassies in Bangladesh. Currently, members include numerous global Nordic brands representing several industries.

The NCCI provides support to its members to facilitate growth and increase market shares - designing specific programs for their members and facilitating business meetings. Furthermore, the Chamber aspires to build an effective coalition amongst Nordic businesses operating in Bangladesh to address global and company specific agendas.

NCCI is a small and efficient chamber building close cooperation with stakeholders, discussing and exchanging views on business conditions and issues affecting their members. Additionally, NCCI provides a platform for Nordic investors and key stakeholders to interact and have meaningful dialogues pertaining to trade and investment. Moreover, NCCI tries to work as a contact point for Nordic businesses and assist Nordic investment in Bangladesh. Stemming from its strong Nordic value base, sustainability and social responsibility has always been at its core.

Sweden-Bangladesh: A Longstanding Bilateral Partnership

The commercial links between Sweden and Bengal trace back more than a hundred years, when the East Bengal market was covered from Swedish company offices in Kolkata. Sweden's diplomatic relations with Bangladesh began soon after the country's independence in 1971, when Swedish development cooperation with the country was initiated. In 2022, Sweden and Bangladesh celebrated 50 years of diplomatic relations.

Development cooperation has been a cornerstone of the bilateral relations. Sweden's current development cooperation strategy with Bangladesh covers the period 2021–2025. The cooperation is focused on democracy, human rights, the rule of law and gender equality, as well as climate change and environment, inclusive economic development, and health and sexual reproductive and health rights (SRHR). Recently, the Swedish government has adopted a new reform agenda for development assistance called “Development assistance for a new era – freedom, empowerment and sustainable growth”. This new agenda envisages increased synergies between development cooperation, promotion and trade, so that development assistance also can provide leverage to mobilise private capital.

As both countries have evolved so has the partnership. Today the ties are multifaceted, dynamic and growing.

With more than 50 Swedish companies already present in Bangladesh, there is potential for stronger commercial relations. Tele-communication equipment and various kinds of industry machineries are the most important export products to Bangladesh. Other engineering and chemical products, paper, wood, iron and steel are also components of the Swedish export basket to Bangladesh. The most important export items from Bangladesh to Sweden are ready-made garments (RMG) and textiles. Many Swedish fashion brands have found Bangladesh to be a competitive sourcing market, and the market is growing steadily. This is also reflected through Sweden's new Trade and Investment Strategy that prioritizes partnerships and long-term collaborations with Asian nations given the vast economic potential in the region.

In parallel with trade and development ties, people-to-people contacts have gradually strengthened over time. Each year, hundreds of Bangladeshi students apply to Swedish universities for graduate studies. While many remain in Sweden to work for Swedish companies, the majority return to Bangladesh with a high-quality education and knowledge about Swedish society and business practices. These alumni provide a bridge between our two societies, as well as a good resource for Swedish companies in Bangladesh and Bangladeshi companies looking to do business with Sweden.

VISA
Sweden & Bangladesh

Business Visa to Sweden

The quickest and easiest way to apply for a visa is to submit your Schengen visa application at VFS Global at the following location:

VFS Global Sweden Visa Application Centre
Delta Life Tower, Plot 37, Road 90, 4th Floor, Dhaka - 1212, Bangladesh
www.vfsglobal.se/Bangladesh

For inquiries about the application process please contact VFS Helpdesk at: +88 0960 677 7333 or e-mail to: FeedbackSWBD@vfshelpline.com

A service fee of BDT 2 116 (equivalent to €18.40) will be charged by VFS Global. The applications are forwarded to the Embassy and subsequently processed and decided by Swedish Migration officers at the Embassy. Please note that for all Schengen visa, there is a mandatory requirement of biometrics. The cost of visa is 9 200 BDT (equivalent to €80).

For more detailed information about the processing of applications or the application process you are welcome to visit the Embassy's website where you also find contact information for the Migration Section for any further inquiries. www.swedenabroad.se

Henrik Frygg/imagebank sweden.se

Business Visa to Bangladesh

Swedish Passport holders and non-Swedish passport holders (resident in Sweden) are required to apply for visa for Bangladesh through Embassy of Bangladesh in Stockholm, Sweden with all relevant documents. Along with the other relevant documents for business visa, an invitation letter from the Bangladeshi company is required and also a letter from the company that is sending the applicant to Bangladesh.

You will find more information regarding Bangladeshi visa on the Bangladesh Embassy website:
<https://stockholm.mofa.gov.bd/>

CORE VALUES

Creativity

Sweden is a strong player in cultural and creative industries. For instance, today Sweden is one of the biggest streamers and exporters of music in the world. Young Swedish children are introduced to music through municipal music schools or music lessons in secondary school, increasing confidence from an early age. While Swedish pop band ABBA set the bar for a long legacy of incredible music, Swedish musicians like Robyn, Swedish House Mafia, The Hives and The Cardigans are big hits across the world. Music innovations from Sweden include SoundCloud and Spotify. SoundCloud is one of the largest music and audio platforms allowing users to listen to, create or share music. Spotify is a subscription based online music service to stream music that gives access to millions of song titles.

There are many examples of new Swedish creative solutions for different industrial sectors. The innovative company Einride has developed a truck that is electric, as well as autonomous. It drives itself using a cloud-based remote-monitoring system with need-based human interference and operation when required. The Karma app presents an opportunity for supermarkets and restaurants to sell their about-to-expire food to costumers at reduced prices. This reduces food waste by providing businesses with an alternative to throwing the food out. Another example is the Swedish company

Volta Greentech which has developed a method to reduce greenhouse gas emissions from cows using seaweed. They have developed a seaweed-based feed supplement which can reduce the methane emissions from cows by around 80 percent.

Sweden has a very vibrant gaming industry and is known as one of the world's best game development regions. It is home to big game hits such as Mirror's Edge, Minecraft, Battlefield and Candy Crush Saga and to cutting-edge innovations within Virtual Reality (VR).

Sweden is also successful in fashion and design with a focus on sustainability and circular economy. Swedish fashion aims to go from linear production to circular, where materials are not discarded after use but instead recycled or used in other ways so that the waste is kept to a minimum.

Stockholm is the tech start-up capital of Europe with the second most unicorns per capita in the world, behind only Silicon Valley. Swedish citizens are encouraged to take the chance to start a new business, which is one of the key factors to the development of many successful Swedish companies.

Innovation

Sweden is the second most innovative country in the world as per the Global Innovation Index 2023. A strong culture of innovation has propelled Sweden to the forefront of technological development. With a high number of patents per capita, Swedish creative thinking has resulted in some life-changing innovations spread around the world. From the invention of the thermometer to the birthplace of start-up unicorns like Skype, Sweden has long fostered innovation and entrepreneurship.

Millions of mobile users stay protected from spams and scams with caller identification, spam blocking Swedish app Truecaller. Millions of hearts around the world beat with the help of a pacemaker. Countless lives have been saved with the help of the three-point seat belt introduced by Volvo and candles are lit with the help of safety matches.

These are just a few examples of Swedish innovations that have made a difference. With the various challenges the world faces today, such as poverty, global warming, and lack of access to clean water, there is a lot of focus on sustainable innovations.

Some of the key factors for a strong culture of innovation, include a historic tradition of inventors, commitment to gender equality, and a strong belief in the individual.

Triple Helix - The Swedish Way

One of the key factors behind Sweden's strong culture of innovation is the close cooperation between private sector, government and academia. This is often referred to as the Triple Helix Model and is widely used in Sweden and many other countries. The underlying idea is that people from different perspectives and with different roles in society can be more innovative and find better solutions if they work together.

Innovation is at the core of several of the activities in Bangladesh and can be found both within larger companies as well medium and small companies entering the Bangladeshi market. It is also a cross-cutting feature of the work as Team Sweden.

Society

Sweden is consistently ranked as one of the most competitive economies in the world by the World Economic Forum and is open to international trade and investments.

Modern Sweden is solidly founded on democratic values, such as openness and transparency, free speech and free press. Democratic principles shape not only the way the country is governed, but all levels in society – from preschool to the workplace. The aim is to ensure that everyone enjoys the same opportunities, rights and obligations in all areas of life and have the freedom to scrutinise how politicians and public agencies exercise their power. In 1766, Sweden became the first country in the world to write freedom of the press into its constitution.

Sweden's economic and social system, including relative economic equality and high levels of trust, often referred to as the “Swedish Model”, has lifted the country to one of the highest standards of living in the world. There is a strong emphasis on freedom of expression and gender equality. Swedes are generally open to new ideas and like thinking outside the box. Society is traditionally non-hierarchical and through flat organisations and

collective decision making, many are given the opportunity to speak and share their ideas. These factors, combined with well-functioning rule of law and low corruption give creative minds more time to focus on what they do best: innovating.

Sweden believes that women and men should have equal power to shape their lives and society. Equality is promoted by making it possible for parents to combine work and family, encouraging shared participation in childcare and giving women and men equal opportunities to rise to leadership positions.

As a part of Sweden's effort to build a sustainable society, free school and university education are provided to all Swedish citizens. Tax-financed education and healthcare contribute to making Sweden a role model for many other countries.

Swedish companies as well as Team Sweden tend to also “walk the talk” and apply these values at all levels.

Sustainability

Sweden strongly believes in a sustainable society in which economic development, social welfare and social cohesion go hand in hand with a sound environment. Areas like environment, human rights, gender equality and transparency are priorities for the Swedish Government. To think and act in a sustainable manner is an integral part of Swedish culture. This is reflected in Swedish companies, who in turn are often at the forefront of integrating sustainability in their business strategies and innovation labs.

Sweden is the first country in the world to pass an Environmental Protection Act. Sweden also hosted the first UN conference on the global environment in 1972. Since then, Sweden has not looked back, managing to grow its economy substantially while reducing carbon emissions, limiting pollution, and taking lead in production of fossil-free steel.

This has led to development of new environmental technologies and sustainable system solutions. This includes renewable energy, green buildings, waste management, air and water treatment, sustainable fuels and battery-driven vehicles.

Sweden has invested heavily in the search for alternative energy sources. More than half of Sweden's national energy supply comes from renewable sources and Sweden aims at further reducing greenhouse gas emissions. The Swedish government has set ambitious goals for sustainability, including going fossil-free by 2045 and 100 per cent renewable energy.

The Swedish Green Model means integrating business and sustainability. Swedish companies have long been at the forefront of combining sustainability and environmental ambitions with growth and innovation. In 2023, Sweden ranked 1st in the Global Sustainable Competitiveness Index.

In Bangladesh, Sweden brings sustainability into its work in areas such as climate and environment, renewable energy, and urban transport. Increasingly, we hope to partner up with Bangladesh to promote and pursue a green transition, withing areas such as circular economy, e-mobility, smart grids and waste management with waste-to-energy solutions.

SWEDISH INNOVATIONS

Top 10 Swedish Innovations

#1 Adjustable Wrench

A staple in many toolboxes, the adjustable wrench or spanner, also popularly called ‘Monkey wrench’ or ‘English key’, often comes in very handy during do-it-yourself (DIY) projects. While the first iteration of this spanner was originally invented in 1842 by British engineer Richard Clyburn, today’s adjustable wrench, the ‘Swedish Key’, is attributed to Johan Petter Johansson, a Swedish inventor who improved upon Clyburn’s original concept and patented it in 1891.

Bildarkivet

The adjustable wrench – in every person's home.

#2 Digital Doctors

Swedish start-ups are leading the way in the global development of digital healthcare, or health-tech, by providing access to different forms of healthcare services through mobile, artificial intelligence (AI) and other technologies. KRY is a doctor–patient app that lets licensed doctors, psychologists, nurses, and physiotherapists meet patients over video.

It aims at taking care of visitors’ both physical and mental health. The company works with the publicly funded national health systems of the countries where it operates, which so far include Sweden, Norway and Spain.

Healthcare apps make it possible to see the doctor from home.

#3 Better Shelter

Better Shelter is an emergency shelter solution in a flat pack. It offers refugees a weatherproof and safe 17.5-square meter home featuring door locks and solar panels.

Better Shelter housing units in Kawergosk, Iraq

It is designed to last for at least three years and is better insulated than traditional refugee tents. Designed to provide a sustainable and cost-efficient product that can be easily transported and assembled, thousands of Better Shelter units have been distributed to many different countries, including Bangladesh. Better Shelter has been developed in partnership with UNHCR and the IKEA Foundation.

#4 Skype

Skype is used by more than 40 million online users daily, having over 300 million active monthly users. Many of us communicate with family, friends,

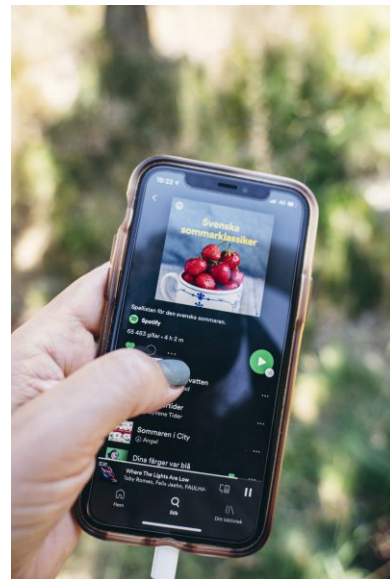

colleagues, and stakeholders through videoconferencing and voice calls through this application, but without knowing that it originally came from Sweden. In 2003, the Swede Niklas Zennström together with the Danish inventor Janus Friis developed the program that enables free calls, instant messaging, video calls, and file sharing between internet connected devices. The program was bought by US auction site eBay for around 2.5

billion USD in 2005, and later on, in 2011 the company was absorbed by Microsoft, now operated by Skype Technologies, a division of Microsoft.

#5 Spotify Music Streaming

Sharing and streaming copyrighted music online remains a hotly debated issue, but Swedish company Spotify has been able to bridge that gap by providing legal online music streaming services as an alternative to pirated music file-sharing sites.

Started in 2006 by Daniel Ek and Martin Lorentzon, Spotify allows users to listen to and share millions of music tracks to their computers and mobile devices such as smartphones. The company estimates that it has 381 million users worldwide, of which 172 million are paying subscribers.

#6 Three-Point Seatbelt

Now a standard requirement in every passenger vehicle, saving around one life every six minutes, the three-point seatbelt was developed by Swedish inventor and safety engineer Nils Bohlin in 1959 for Volvo. It is designed with a Y shape to spread out energy across a moving body during an accident.

Nils Bohlin invented the three-point seatbelt back in 1959.

#7 Pacemaker

In 1958, Rune Elmqvist developed a battery-run artificial pacemaker, which was used for the very first pacemaker operation done by surgeon Åke Senning at Karolinska University Hospital in Stockholm. The pacemaker is placed under the heart patient's skin and the electrical pulses it generates ensure that muscles expand and contract normally, regulating the heart.

Each year about 600 thousand pacemakers are implanted worldwide

#8 Uniti

Sweden is among the world leaders in the transition towards electric vehicles and is committed to reduce

Uniti One-a 'Tesla for megacities'?

emissions from transport by 70 per cent by 2030. One of the most hyped examples of Swedish innovation in this field is Uniti, a start-up that is developing a light-weight electric city car that has been dubbed a ‘Tesla for megacities’. Following a crowdfunding campaign, the company received some 3,000 pre-orders for its first model.

#9 The Walking Frame

Swedish social scientist Aina Wifalk contracted polio – a virus that can cause temporary or permanent paralysis – at the age of 21. After tearing her shoulders from using walking sticks for two decades, she came up with the walking frame, or walker, an invention that has made life easier for elderly and persons with disabilities since the late 1970s. Because Wifalk wanted the walker to be accessible to as many people as possible, she never patented it. To this day, the walker helps your grandparents stay mobile and active.

The modern walking frame is the brainchild of Aina Wifalk.

#10 Zipper

The modern-day zipper was improved upon and developed by Swedish-American inventor Gideon Sundbäck from an earlier less effective model in 1913. Sundbäck’s redesigned version called the ‘separable fastener’ was patented in 1917 and features interlocking teeth pulled together and apart by a slider.

Swedish efficiency at its simplest – just zip it!

FOCUS AREAS

Textiles – Sourcing and Production

The Textile and Readymade Garment (RMG) sector in Bangladesh employs more than 4 million workers across more than 4000 factories and contributes to around 16 percent of the country's GDP. It accounts for more than 80 percent of exports from Bangladesh, with the European Union (EU) being the largest export destination for Bangladesh. Bangladesh has emerged as a key sourcing hub for Swedish fashion brands like H&M, Lindex, IKEA, Gina Tricot, KappAhl and others. Textile exports from Bangladesh to Sweden was more than 6 billion SEK in 2023 according to data from the National Board of Trade Sweden.

As the textile sector undertakes a green transition, sustainability in the global value chain will play a significant role. Globally, the brands are repositioning themselves and investing in their supply chains to align with growing customer expectations. In addition, changes in EU-regulations will gradually mandate that the textile sector adjusts itself in order to stay competitive. The industry is transforming with focus on digitalisation, green transition, improving workers welfare and skills and is also looking for investments to drive innovation and R&D. Bangladesh has made remarkable strides sustainably with over 200 LEED-certified green factories, solidifying its commitment to environmental stewardship. The Government of Bangladesh

is also encouraging foreign investments to bring global best practices and increased collaboration.

Sweden is supporting the sector at various levels by engaging with relevant stakeholders when it comes to a green and just transition of the RMG-industry. The flagship initiative The Sustainable Fashion Platform (SFP) by Sweden aims at gathering Swedish stakeholders under one umbrella to introduce climate-smart green tech to promote a green transition in Bangladesh's RMG sector and promote the necessary policy reforms. For instance, innovative companies like Atlas Copco and Alfa Laval are already well-known for their energy-efficient innovative industrial solutions across sectors. Swedish brands and companies altogether, with their advanced agendas on sustainability and innovation, are well placed to support the textile sector in Bangladesh on its continued journey.

- Ministry of Commerce: <https://mincom.gov.bd>

Sustainability & Circularity

Sweden and Swedish companies are at the forefront when it comes to sustainability. Sweden is a long-standing partner in sustainable development and ranks second in the Sustainable Development Report 2023 (SDG Index). Bangladesh has an equally strong focus on the SDGs, while maintaining its economic growth. Sustainable production is increasingly recognised as a key competitive advantage in international trade. One of the main objectives of the Swedish Government is to strengthen Sweden's position as a prioritised partner for green and digital transition. The Swedish business sector's innovative capacity generates products and solutions that provide global climate benefits by reducing emissions and environmental impact, this contributing to the green and digital transition.

Sweden is set to meet 100 percent of its electricity needs from renewable sources by 2040. Bangladesh has also ambitious target of covering 40 percent of its power generation with clean energy by 2041, including 10 percent through renewable sources. Hence, green energy and focus on energy efficiency will be key components in the bilateral trade relationships between Bangladesh and Sweden. Likewise, Bangladesh's Vision 2041 also aims at putting its power and energy sector on a sustained path for a high-income economy.

Sweden, as one of the largest contributors to international climate financing, has pledged to become the world's first fossil-free welfare nation and achieve climate-neutrality by 2045. In this regard, Sweden is a longstanding dedicated partner to Bangladesh. For instance, during COP28 in Dubai, Bangladesh secured the Global Center on Adaptation (GCA) Locally Led Adaptation (LLA) Championship Award in the category of Innovation in Developing Finance for the Local Government Initiative on Climate Change (LoGIC) Project supported by Sweden as a key donor country.

Sweden has also emerged as a reliable partner to Bangladesh facilitating the green transition, with many Swedish companies introducing next-gen sustainable solutions and technologies. Swedish expertise can contribute to resource-efficiency through re-using, reducing, and re-cycling to ensure a sustainable and more circular future in Bangladesh. For instance, Swedish transport company Scania has a recycling infrastructure where precious raw materials are recycled and can be used to reduce the need for virgin material in the production of new batteries, in addition to the possibility of reusing and repurposing the old batteries. Scania also focuses on bio-fuel powered buses which can make a noticeable contribution to decarbonisation in the transport sector of Bangladesh. Other key corporate examples include Swedish brand Tetra Pak's fully renewable package solutions, incorporating recycled content in the packaging and minimising environmental footprints. ABB control system technology has also been automating power plants in Bangladesh for more than five decades.

Bangladesh is a future high-potential market for solutions in the fields of renewable energy, energy efficiency, waste and water management. Swedish companies are well-placed to provide Bangladesh with high-tech green technologies, and several Swedish companies in the field are expressing interests in establishing themselves on the Bangladeshi market.

Responsible agencies:

- Ministry of Power, Energy and Mineral Resources: <https://www.mpemr.gov.bd>
- Ministry of Environment, Forest and Climate Change: <https://moef.gov.bd>
- Ministry of Water Resources: <https://mowr.gov.bd>

Digitalisation

There is great potential to increase exchange between Sweden and Bangladesh in the ICT and e-commerce sector. Sweden has a well-developed digital economy, as well as some of the world's leading companies when it comes to the development of future digital services and solutions. Bangladesh has several established solutions for digitalisation of the economy, such as Bkash, Nagad and Rocket apps for digital money transfer, bill pay and online and offline purchases. As the Bangladeshi economy continues to develop, the demand for digitalisation solutions is growing steadily.

With its world-renowned digital infrastructure solutions, Sweden can play an instrumental role in unleashing the full potential of Bangladesh's digital transition. The rapid digitalisation of Bangladesh has also made it the second-largest supplier of online labour after India, generating 100 million USD annually and constituting 16 percent of total freelance workers in the global outsourcing market. Thus, Swedish companies can also leverage ample opportunities in a rapidly growing digital Bangladesh, contributing to a booming e-commerce, e-governance, digitalisation, and online labour.

The Smart Bangladesh Vision – and its four key pillars – "Smart Citizen", "Smart Government", "Smart Society" and "Smart Economy", is a major focus of the Government of Bangladesh in accelerating the digital transition, including the use of advanced technologies, such as internet of things (IoT), artificial intelligence

(AI), blockchain, big data, robotics, drone technology, 3D printing and other cutting-edge technologies to develop the overall digital ecosystem.

The vision of Smart Bangladesh opens up great potential for further collaboration between Sweden and Bangladesh in the ICT-sector. For instance, Swedish world leading company Ericsson has been in the country since 1997 and has enabled communication service providers to capture the greater value of connectivity and digitalisation. Ericsson is joined by other small and medium sized Swedish companies with cutting edge digital solutions that can provide great benefits to the Bangladesh market.

Sweden is on track to be the world's first 100 percent cashless country and its financial techs are pioneering the future of finance. In line with the trend of rapid digitalisation in Bangladesh, the ways to access information and services digitally are also growing. This gives immense opportunities for more collaborations between Sweden and Bangladesh in the digital world.

Responsible agencies:

- Posts and Telecommunications Division: <https://ptd.gov.bd>
- Aspire to Innovate (a2i): <https://a2i.gov.bd>

Urban Planning

Bangladesh is a rapidly developing country and infrastructure development projects are widespread. In Dhaka alone, a new metro rail, an elevated expressway, various flyovers, and the recent Terminal 3 of the international airport are being constructed. As the megapolis continues to grow, so does the demand for smart urban planning, including in the area of public transportation. Outside of the capital, buses, trains, lorries and ferries are the main modes of transportation. At the same time, infrastructure remains under dimensioned, and together with an aging transport fleet, road transport becomes both inefficient and hazardous. There is great interest from different parts of Bangladesh to procure new, high-quality buses and lorries to meet the increasing demand of both personal and freight transportation.

Swedish transport companies like Scania and Volvo have agent offices in Dhaka and have been providing high-quality Swedish vehicles to Bangladesh for several years. There is more potential for Swedish transport and urban designing skills to be used in Bangladesh transport and infrastructure sector. Systematic and smart urban planning can connect people, reduce poverty, reduce pollution and have impactful benefits for the environment, as well as peoples' health and wellbeing.

Swedish companies are known for their sustainable approach, not least when it comes to urban

planning, where the development of the Smart City concept is central. Incoming Swedish delegations have met relevant stakeholders about how Swedish Smart City solutions can help Dhaka City to plan and implement development projects. Bangladesh also needs world-class global solutions to 21st century challenges such as reducing energy dependency, getting clean air, lessening traffic congestion, ensuring transportation for all, upgrading security, safety and urban vehicle management systems – all of which are areas where Swedish companies and organisations can play central roles.

In achieving the Sustainable Development Goal 11 for Bangladesh - making cities “inclusive, safe, resilient and sustainable”, Swedish companies are well-placed to provide expertise, designs, and solutions for a broad spectrum of climate-smart urban development projects. There is great potential for Sweden and Bangladesh to work together to enhance the smart city solutions for Dhaka and other major cities of Bangladesh, jointly striving to achieve the global Sustainable Development Goals.

FINANCING

The Swedish Export Credit System

The Swedish Export Credit System

To facilitate and promote exports and the internationalisation and competitiveness of Swedish industry, Sweden offers a government-backed export credit system. This system facilitates the financing of transactions with Swedish exporting companies and has strong benefits for all parties involved. The support is made up of two organisations:

offers guarantees for payments and financing. The guarantees give international customers competitive financing terms, while lowering the risk for Swedish exporting companies and commercial banks.

provides long-term funding for Swedish export related transactions. Enjoying a high credit rating, SEK can offer favourable loans to facilitate export deals.

How to finance a Swedish export contract

Export transactions often involve large contracts requiring long repayment periods. A common form of financing is an export credit provided by a commercial bank – a buyer's credit.

Financing of a large Swedish export contract usually involves a commercial bank as the arranger. The bank, or a group of banks, arranges and administers a loan to the buyer in the export contract. EKN is the guarantor, taking the repayment risk with a small portion of the risk retained by the arranging bank. SEK can provide funding, and also sometimes assume the role as arranger, usually jointly with one or more banks. See an example below.

Commercial Bank

+

+

ARRANGES

- Retains 5% of the risk on the borrower
- Loan structuring & documentation

GUARANTEES

- Sweden is rated AAA
- Covers repayment
- Covers 95% of the borrower risk

PROVIDES FUNDING

- Rated AA+
- Offers optional funding
- Administers the state-supported CIRR-system*

* The Commercial Interest Reference Rate, CIRR, is a state-supported interest rate administered by SEK. It allows exporting companies to offer their customers funding at a favourable fixed interest rate.

Benefits

- The exporting company receives upfront payment and can still offer customers competitive financing.
- The commercial bank minimises its exposure to risk and capital loss thanks to the EKN guarantee. The bank also gains access to attractive funding options with SEK, which improves their balance sheet.
- The buyer receives access to attractive financing with long tenures. An export credit also diversifies the buyer's loan portfolio and reduces the use of bank credit limits.
- With an EKN guarantee, the commercial bank can turn to SEK for optional funding of the loan. The loan is assigned to SEK together with the rights under the EKN guarantee. The loan is now on SEK's balance sheet, while the bank retains the 5% non-covered portion

How it works

To ensure the best conditions for all parties involved it is very important for the exporter and bank to contact EKN and SEK at an early stage. This is to enable structuring of the business agreements regarding securities, capital structure, and being OECD-compliant. In our environmental and social due diligence, EKN and SEK comply with international standards.

Below you will find a schematic outline for a buyer's credit. Please note that the steps can take place simultaneously.

1. The exporting company and the buyer sign a sales contract. Payment is to be made at delivery, or with a short credit period.
2. A bank signs a loan agreement with the buyer.
3. The bank applies for a guarantee – preferably before the contract is signed, and receives an offer from EKN. EKN normally covers 95% of the loan. The bank notifies EKN of disbursements and receives the guarantee. This is when the premium is paid.
4. If the bank is looking for funding they will have contacted SEK and received an offer, before signing the contract. The bank will then assign the loan as well as the rights under the EKN guarantee to SEK.

The bank retains the 5% risk share on the borrower as well as their obligations to EKN, and administers the loan. If the borrower fails to pay according to the loan agreement, EKN will indemnify SEK directly.

To find out more about how you can benefit from the Swedish export credit system, get in touch today.
