Foreword

This tenth edition of the Sweden–India Business Guide highlights Sweden's key strengths and values, offering a useful resource to deepen cooperation and expand business ties between our nations.

India and Sweden share a strong, multifaceted relationship built on mutual respect, shared democratic values, and a growing convergence of economic and strategic interests. In 2023, India and Sweden celebrated 75 years of diplomatic relations—a milestone that underscored the strength and depth of our bilateral ties.

Our partnership spans a wide array of sectors, including science & innovation, renewable energy, sustainability, healthcare, life sciences, space, defence, infrastructure & manufacturing and cultural exchange, reflecting a shared vision for progress, sustainability, and inclusive growth.

High-level engagements have played a crucial role in deepening this partnership, with recent Swedish Ministerial visits to India further providing renewed momentum to our bilateral relations. Indian Minister of Commerce & Industry, Piyush Goyal's visit to Sweden in June 2025 marked another milestone in expanding and diversifying the business partnership.

The Joint Action Plan and the Strategic Innovation partnership for a sustainable future, established during Prime Minister Modi's visit to Sweden in 2018 and all ensuing discussions on a bilateral level since then, have set a strong foundation for ongoing collaboration in areas that matter

deeply to both nations. At COP28 in 2023 the Indian and Swedish Prime Ministers launched LeadIT 2.0 (Leadership Group for Industry Transition), a joint initiative to decarbonize heavy industries like cement and steel and achieve net-zero emissions by 2050.

Team Sweden's intent of enhanced cooperation is visible with the opening of Business Sweden's third office in India, in Mumbai as Western India figures as an important international trade center and Mumbai accounts for a quarter of the country's industrial production.

Sweden is an active member of the International Solar Alliance, an initiative of India aimed at promoting renewable energy and sustainable development. Swedish companies have long embraced the spirit of "Make in India" with close to 280 Swedish firms operating in India today. These companies directly employ around 220,000 people. Meanwhile, Indian IT and engineering expertise has significantly contributed to the Swedish economy. These people-to-people connections have enriched both societies, fostering greater cultural understanding and cooperation. An increasing number of Indian students are also choosing Sweden as a destination for higher education.

Sweden's emphasis on the circular economy, knowledge driven development, and sustainability aligns closely with India's developmental priorities. Together, we are well positioned to build sustainable, future-ready businesses and foster innovation-driven growth.

TEAM SWEDEN

Embassy of Sweden

The Embassy of Sweden in New Delhi represents the Swedish Government in India and is dedicated to strengthening bilateral relations across a broad range of sectors, both public and private. It engages in diverse activities aimed at promoting political, economic, academic, research & development and cultural ties between Sweden and India.

A key focus of the Embassy is to foster trade and economic cooperation, with particular emphasis on business promotion. It also plays an important role in disseminating information about Sweden in India.

In addition to these responsibilities, the Embassy handles visa and permit applications for Indian nationals as well as citizens of third countries and provides consular support to Swedish citizens. The Ambassador in New Delhi is also accredited to Bhutan, the Maldives, Nepal and Sri Lanka.

The Office of Science and Innovation (OSI) New Delhi, located within the Swedish Embassy, operates under the Swedish Ministry of Climate and Enterprise. Its mission is to deepen strategic collaboration between Sweden and India in the fields of research, innovation, and higher education.

The Swedish Consulate General

The Swedish Consulate General was established in 2012. Its jurisdiction covers the western states of Maharashtra, Gujarat, Goa and the union territories Dadra and Nagar Haveli as well as Daman and Diu.

Trade and Investment, as well as Sweden Promotion are its focus areas. Consular assistance to Swedish citizens and residents is also part of the core mission.

The Consulate works closely with Team Sweden members: the Swedish Embassy in New Delhi, Business Sweden and Swedish Chamber of Commerce in India to help liaise and increase business contacts between Swedish companies and strategic industries in India. They help increase Swedish industry presence in Western India and support Indian investments in Sweden in areas including green transition, semiconductors, energy & environmental technology, medtech, health care & life science, creative industries and ICT.

Business Sweden – The Swedish Trade & Invest Council

Business Sweden serves as a key pillar of Team Sweden in India, working in close collaboration with the Embassy of Sweden in New Delhi, the Consulate General in Mumbai, the Swedish Chamber of Commerce India and other Swedish institutions to enhance bilateral trade and investment relations between Sweden and India.

Established in India in 1995, Business Sweden supports Swedish companies in expanding their global reach and assists international companies in investing and growing in Sweden. Guided by its mission, Progress by Trade, the organization opens doors to global opportunities and fosters sustainable growth through strategic advisory and hands-on support.

Jointly owned by the Swedish Government and the private business sector, Business Sweden serves a diverse client base ranging from innovative start-ups and SMEs to large multinational corporations, offering tailored services to support their internationalization journeys.

With offices in New Delhi, Bengaluru, and Mumbai, Business Sweden's team of over 35 advisors engages with stakeholders across both public and private sectors. The organization focuses on key sectors including industrial manufacturing, space, semiconductors, energy and environmental technologies, healthcare and life sciences, AI, ICT and DigiTech, creative industries and retail, and others.

In India, Business Sweden plays an active role in advancing Sweden's economic diplomacy by promoting Swedish industry, facilitating business partnerships, and supporting Indian investments into Sweden. It also collaborates with the Swedish Chamber of Commerce in India, Embassy of Sweden in Bangladesh and Honorary Consulates in Chennai, Kolkata, Bhutan, the Maldives, Nepal, and Sri Lanka to ensure a cohesive and impactful presence across the region.

Swedish Chamber of Commerce India

The Swedish Chamber of Commerce India is an organization for and by the Swedish companies in India. In close collaboration with their member companies, the Chamber works on strategic questions to further the value proposition of Sweden and build meaningful, sustainable, and successful businesses in India.

The Chamber provides catalytic platforms for collaborations, knowledge development, and sharing of experiences and best practices. The Chamber also gathers the collective voice of the Swedish business community on ease of doing business and the experience of India as a business destination. With Swedish companies present in the country for more than 120 years, the experience runs deep. Together they continue to tell the story of “Sambandh” that means relationship and connection in both Hindi and Swedish.

TRANSFORMATIVE COLLABORATIONS

MEA India

Science and Innovation Partnership

2025 marks 20 years of science, technology, and innovation collaboration between our two countries. Innovation and science are one of the fastest growing areas of Indo-Swedish bilateral cooperation. The Swedish Government has seven overseas offices of Science and Innovation, one located at the Embassy of Sweden in New Delhi, emphasizing the strategic importance of science and innovation in our cooperation.

At the core of this cooperation is the Joint Innovation Partnership (JIP) for a Sustainable Future agreed in 2018 during Indian Prime Minister Narendra Modi's visit to Sweden, that brings the Swedish and Indian academic and innovation communities together for increased impact across areas, including clean technologies, energy, smart cities, digitalisation, new materials, space, circular and bio-based economy, and health and life sciences. The development of this partnership is coordinated by

the Swedish Ministry of Climate and Enterprise and the Indian Ministry of Science and Technology.

The JIP received further impetus with Their Majesties King Carl XVI Gustaf's and Queen Silvia's visit to India 2019, during which His Majesty the King and the Honorable Prime Minister Narendra Modi jointly inaugurated the first ever India-Sweden High-Level Dialogue on Innovation Policy in New Delhi.

The JIP offers a strong framework for bilateral science cooperation and has led to several co-funded research and innovation (R&I) programmes, many led by industries. The Swedish R&I funding agencies like Vinnova, FORMAS, Forte, STINT, IGNITE

SWEDEN, Swedish Innovation & Science Parks, the Swedish Energy Agency, and the Swedish Research Council have actively expanded their cooperation with their Indian counterparts, such as the Department of Science and Technology, the Department of Biotechnology, the Indian Council of Medical Research and the Ministry of Earth Sciences. It is evident that the JIP has laid a solid foundation for developing & strengthening science and innovation collaboration between Sweden and India and find solutions to shared challenges in both countries and beyond.

ISBLRT

The India–Sweden Business Leaders Round Table (ISBLRT) is a high-level platform bringing together business leaders from Sweden and India. It was officially established in February 2016 as part of the joint statement between Indian Prime Minister Narendra Modi and then Swedish Prime Minister Stefan Löfven. ISBLRT focuses on identifying shared challenges and opportunities in areas such as research, innovation, investments, financing, trade, business, industrial development, and regulatory frameworks. The platform aims to strengthen bilateral relations and provide strategic guidance to political leadership in both countries, while also contributing to broader European and global business perspectives.

The forum operates through four Joint Working Groups (JWGs), each led by a senior business leader. These groups cover key focus areas including Smart and Sustainable Cities, Digitization and Defense, Skilling and Life Sciences, and Traffic Safety. They work both strategically and operationally to drive agendas forward. Startups and innovation are cross-cutting themes that run across all working groups.

The Sweden–India Business Council (SIBC) serves as the Secretariat on the Swedish side, while the Confederation of Indian Industry (CII) fulfills this role on the Indian side. The forum is co-chaired by prominent leaders, with Marcus Wallenberg representing Sweden as co-chair.

Driving Green Transition

Sweden's industrial path to a fossil-free future

HYBRIT initiative aims to bring fossil - free steel to market by 2026.

Heavy industry in Sweden, along with other key business sectors, has developed clear roadmaps to transition to fossil free operations. These efforts are part of the broader commitment to building a more sustainable, green economy and achieving Sweden's national climate goal of net zero emissions by 2045.

Since 2016, Swedish companies SSAB, LKAB and Vattenfall have been jointly leading the HYBRIT initiative (Hydrogen Breakthrough Ironmaking Technology) to develop the world's first fossil-free iron and steel. By using fossil-free electricity and hydrogen, the project aims to eliminate virtually all carbon dioxide emissions across the value chain. Their target is to bring fossil - free steel to market by 2026 and achieve full-scale production by 2030. Similarly, the Swedish steel venture, Stegra, which will include an integrated sustainable hydrogen production facility. Production is expected to begin in 2025. Stegra will be a fully integrated, digitalised and automated greenfield steel plant built in collaboration with customers across multiple segments including automotive, commercial vehicle, white goods, furniture, and industrial equipment.

In the cement sector, Cementsa - part of the Heidelberg Cement Group is working to establish the world's first carbon neutral cement plant by

deploying carbon capture and storage (CCUS) technology. Similarly, the aviation industry has set itself ambitious climate targets, aiming for all domestic flights to be fossil-fuel free by 2030, and international departures from Sweden to meet this standard by 2045. Meanwhile the automotive industry is aiming for 80% of new sales of private cars and 50% of all heavy trucks to be electric by 2030.

At the political level, the Leadership Group on Industrial Transition (LeadIT) was launched by the Prime Ministers of Sweden and India at the UN Climate Action Summit in New York in autumn 2019. This initiative aims to drive the climate transition in heavy industry to achieve fossil-free and net-zero emissions by 2050, in line with the goals of the Paris Agreement. The leadership group has been developed in collaboration with the World Economic Forum and has so far brought together around 18 countries and 27 industrial companies.

The leadership group promotes innovation and technology exchange, while promoting collaboration between policymakers, academia and industry to accelerate the green transition. The Secretariat for the group is hosted by the Stockholm Environment Institute.

Sweden's Minister for International Development Cooperation and Foreign Trade, Mr. Benjamin Dousa with India's Minister of Commerce & Industry, Piyush Goyal in Stockholm

Swedish Indian Business History

Diplomatic relations between Sweden and India were established in 1948, the year after India became independent. However, business relations between the two nations date back further than that. The Swedish – Indian history can be viewed in three separate waves of development. The first wave of Swedish companies entered India in the beginning of the 20th Century, with pioneering companies like Ericsson, SKF, Swedish Match and ASEA (later to become ABB).

The second wave came after independence. In 1957, the Indian Prime Minister, Jawaharlal Nehru, visited his Swedish counterpart, Tage Erlander, and the two political leaders agreed that Sweden and India had a lot in common and would profit from collaboration. A large area of land was allocated to Swedish companies in the city of Pune, which was a

strategically good location considering the proximity to India's commercial centre in Mumbai. In the 1960-70s, Pune became an important industrial hub, where Swedish companies such as Alfa Laval, Sandvik and Atlas Copco were established.

The third wave of Swedish companies entered India during the 1980s and 1990s with among others Volvo Trucks & Buses and Perstorp. Companies with large purchasing organizations, such as IKEA and H&M, also started doing business in India. In the 2000s, Volvo Cars and Scania established subsidiaries and were accompanied by an influx of small and medium sized companies, such as Systemair and Roxtec, to name a few.

Trade between the two countries has grown over the last decade and a steadily rising number of Swedish companies have established themselves in India. At

present, we see a fourth wave of companies entering India or expanding on their footprint. Companies are establishing global or regional hubs for R&D, sales, and manufacturing etc. Moreover, there is an influx of fast-moving consumer companies finding their space in a developing Indian retail market, and innovative new businesses, especially with focus on green technology and solutions.

Whilst Swedish companies have a 120-year long history in India, Indian companies have been establishing and investing in Sweden since the start of this millennium. The first foray was led by large IT companies with the top tier companies such as TCS, Wipro, Infosys and L&T Infotech. A second and more decisive wave of IT companies commenced a decade later led by Mahindra-Satyam, and the acquisition by HCL Technologies of Volvo IT and its 900 employees. Indian investments in Sweden in other areas are evident in industrial sectors such as bioeconomy with Aditya Birla Group's acquisition of DomsjöFabriker in viscose fiber, and Bharat Forge in Kilsta in automotive. One of the most recent entries is KPIT Technologies, opening a new Technology Centre in Gothenburg, for mobility innovation.

Indian companies look to Sweden for cutting edge innovation and applied research. To date there have been investments and collaborations within pharmaceuticals, material research and automotive technologies amongst others. Indian automotive companies are now expanding in the Swedish market through organic investments but also via acquisitions. For example, Tata AutoComp Systems acquired Titan X while Sanseramade an acquisition of MAPE. Furthermore, Tata Technologies acquired Escenda for design and engineering services. Indian companies are now investing and expanding their footprint in Europe with Sweden as a gateway.

More than 7000 people are currently employed by roughly 70 Indian companies in Sweden, with many of them in the IT services industry. Additionally, an approximate of double this number of the workforce is providing services to Swedish clients based out of India. Sweden offers complimentary opportunities for Indian companies' ambitions, which is in line with Indian businesses' increasingly global outlook.

CORE VALUES

Creativity

Sweden is a global leader in creative industries. It ranks among the top exporters of music and is a powerhouse in the development of original, mass-market gaming industry. Swedish strengths also extend to fashion, design—with a growing focus on sustainability—literature, art, and film.

Sweden is globally recognized for its acclaimed film industry with legendary filmmakers such as Ingmar Bergman, Ruben Östlund, Lasse Hallström and Lukas Moodysson gaining international success. The Swedish Film Institute, established in 1963, plays a key role in supporting and funding film production, distribution, and public screenings.

Stockholm has emerged as Europe's leading tech startup hub, ranking second to Silicon Valley in the number of unicorns per capita. This innovative spirit is reflected in Sweden's vibrant gaming industry, which has produced global sensations such as Minecraft, Mirror's Edge, Battlefield, and Candy Crush Saga. The country also stands at the forefront of Virtual Reality development

India and Sweden share a dynamic cultural exchange. Artists and creatives from both countries increasingly draw inspiration from each other—enriching their craft and driving mutual growth.

**Stockholm is
Europe's tech startup
hub, boasting the
second-highest number
of unicorns per capita
globally**

Gender

Sweden's Government promotes gender equality in all areas of society. In practice, this means a commitment to building a society in which women and men, girls and boys can live their lives to their full potential. Gender equality is also part of the solution to society's challenges and a given part of a modern welfare state - for justice and economic development.

Many companies work actively with gender equality and equity questions. In the last year, close to half have expanded or adjusted their DEI policy to do more, based on feedback and outcomes. Companies work with strategic recruitment, active mentorship, and leadership development to increase the number of women in their workforce, especially in leadership positions. Policies to give equal opportunities and rights as well as ensuring equality of choice, such as replacing the gender-specific maternity leave with parental leave, are being implemented.

Swedish companies in India have joined hands in the Kraftsamla programme spearheaded by the Swedish Chamber of Commerce India, with the aim to build psychologically safe work cultures for all. Today, 185 leaders from 40 companies and 11 countries have participated in the Task Force on Gender Sensitisation training programme. We also go deeper, and study to uncover fresh insights into workplace attitudes and ecologies through studies on culture and mindset. Kraftsamla also seeks to build bridges for women to enter and successfully

remain in the workforce, through scholarship programmes, and equitable digital access.

Sweden and India align on this mission.

Photo: Ashish Allawadi, SSCI

Innovation

Sweden ranks as the 2nd most innovative country in the world, according to the Global Innovation Index. With one of the highest numbers of patents per capita, Swedish creativity has led to life-changing innovations with global impact.

This strong culture of innovation is rooted in a long tradition of inventors, a deep commitment to gender equality, and a belief in individual potential. Free education and close collaboration between universities, government, and industry further fuel Sweden's innovation ecosystem and business success.

The Triple Helix—The Swedish Way

A key pillar in Sweden's innovation ecosystem is the Triple Helix model: close cooperation and bridging gaps between the private sector, government, academia and civil society. This collaborative approach is built on the idea that diverse perspectives and roles in society yield better solutions when working together. It is a model that not only drives innovation but also ensures its relevance, inclusivity, and long-term impact.

Innovation is also central to Sweden's engagement in India, whether through the Joint Innovation Partnership for Sustainable Future or well-established multinationals or dynamic startups.

Swedish organizations bring innovation into every facet of their engagement—developing sustainable solutions, advancing digital transformation, and co-creating solutions to shared challenges with Indian partners. At Team Sweden, innovation is more than a value—it is a way of working and a guiding principle in everything we do.

A modern office interior with large glass windows and people working at laptops. The scene is brightly lit, with a man and a woman in the foreground focused on their work. The background shows other employees and the office's architectural details.

**Sweden is the
second most
innovative country in
the world as per the
Global Innovation
Index**

Skills

Swedish companies in India build skills throughout their value chains. Close to seven out of ten companies equip people within the area of their business operations, at suppliers or customers, or in community development programs. This has been part of their commitment to India for a long time.

India's growth is impressive. It is a young nation with millions entering the labour market annually, more than 2 million are estimated to be STEM graduates. This is a great possibility, but also a challenge to equipping men and women with skills that lead to employment is important and bridging the skill gap in the era of automatisisation and digitalisation.

India is striving to upskill working age people nationwide to prepare them for the jobs of the 21st century as part of its New Education Policy (2024). The policy helps people build skills needed for the modern economy by moving away from rote learning towards flexible, creative thinking, offering a strong programme of vocational education, and emphasising modular and lifelong learning to help people update their skills in a fast-changing economy.

Sweden is a strong proponent of public-private partnerships and believes in combining forces to build sustainable eco-systems. It is about us working together for our future. The triple helix model is widely used in Sweden. The underlying idea is that people from different perspectives, with different roles in society can be more innovative and find better solutions if they work together.

security**

Society

Sweden is consistently ranked among the world's most competitive economies by the World Economic Forum, thanks to its openness to trade, innovation, and investment. Known for rich natural resources, high-tech industries, and a strong social fabric, Sweden balances economic strength with a caring society.

Modern Sweden is built on democracy, openness, and equality. These principles guide not just governance, but everyday life—from education to the workplace. Transparency and equal rights are at the core, ensuring everyone can hold public institutions accountable.

Gender equality is a core value, with policies that support equal opportunities in both family life and the workplace. Parents are entitled to 480 days of paid parental leave, encouraging shared childcare responsibilities and enabling both women and men to pursue leadership roles and professional growth.

The “Swedish Model” combines a dynamic market economy with a strong welfare state, promoting freedom of expression, gender equality, and financial security. As a part of Sweden's effort to build a sustainable society, free school and university education are provided to all Swedish citizens. Tax-financed education and health care contribute to making Sweden a role model for many other countries.

Swedish companies as well as Team Sweden present in India embody these values in practice, at home and abroad.

OFÄRGAT GLAS

FÄRGAT GLAS

PLAST

PAPPER

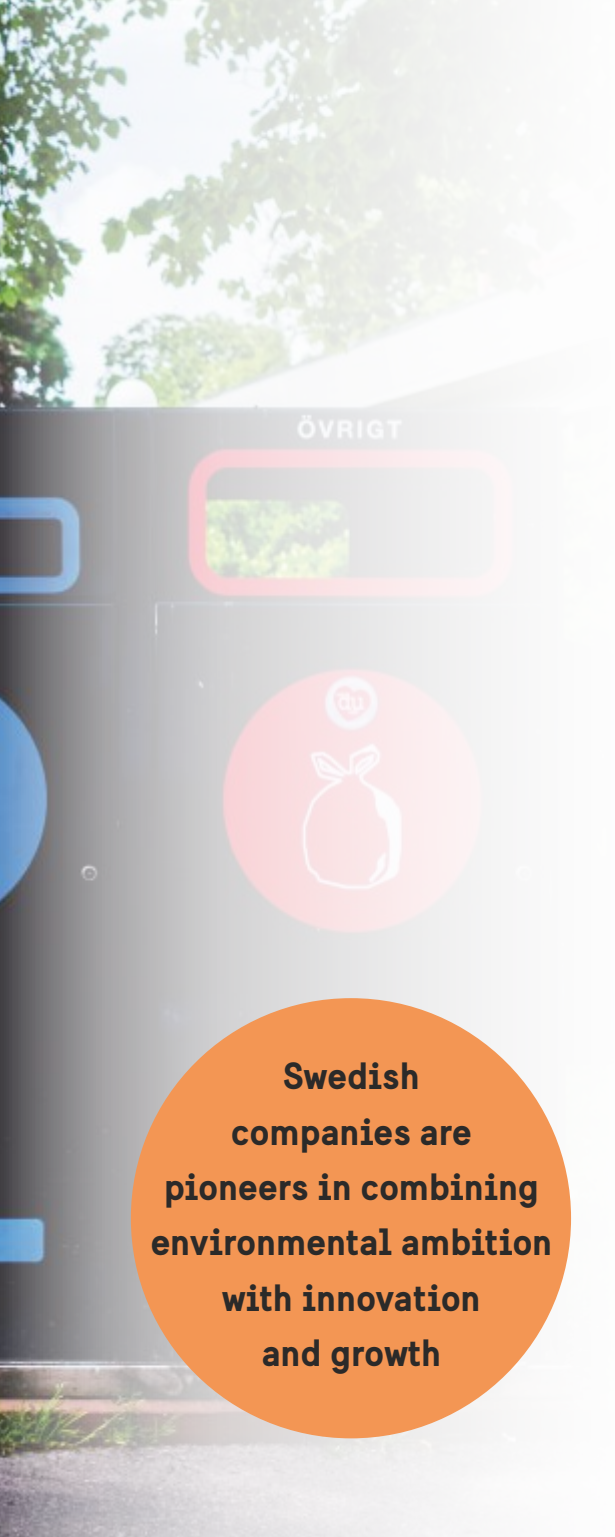

Sustainability

Sustainability is deeply embedded in Sweden's cultural and societal values. As a global leader in environmental technology and sustainable solutions, Sweden was the first country in the world to pass an Environmental Protection Act. Over the years, it has demonstrated that economic growth can go hand in hand with reduction of carbon emissions and decline in pollution levels.

Sweden excels in key areas such as renewable energy, green building practices, waste management, sustainable fuels, and electric mobility. Today, half of the country's energy comes from non-fossil sources, and Sweden continues to push for even lower greenhouse gas emissions in its pursuit of a carbon-neutral future. The country is an active participant in international climate agreements, including the Paris Agreement, and has established dedicated agencies to fund research into next-generation carbon-neutral solutions.

The Swedish green model integrates sustainability with business. Swedish companies are pioneers in combining environmental ambition with innovation and growth, offering solutions that not only benefit the planet but also fuel economic success. In India, sustainability remains central to the work of the Swedish business community—from climate and clean energy to urban transport and waste-to-energy solutions. Joint projects between Sweden and India are underway to adopt best practices and foster innovation, addressing environmental challenges and working toward shared sustainability goals.

The background of the slide features a photograph of a recycling bin. The bin has a dark grey body with a blue lid and a red lid. The word "ÖVRIGT" (Other) is visible on the bin. There are also some icons on the bin, including a recycling symbol and a trash can icon. The bin is set against a backdrop of green trees and a clear sky.

SWEDISH INNOVATIVE ECOSYSTEM

Swedish Innovations

Sweden consistently ranks second in the Global Innovation Index.

With a rich history of innovation, contributing significantly to various fields such as technology, healthcare, and sustainability, the country's innovative spirit is driven by a combination of factors, including a strong emphasis on education, a collaborative culture, and substantial investment in research and development.

Historical Innovations

Sweden's legacy of innovation dates back centuries. Here are a few notable historical inventions:

- **Zipper:** The modern-day zipper as we know it was improved upon and developed by Swedish-American inventor Gideon Sundbäck from an earlier less effective model in 1913.
- **Celsius Temperature Scale:** Developed by Anders Celsius in 1742, this scale revolutionized scientific measurement.
- **Three-Point Seatbelt:** Invented by Nils Bohlin in the 1950s, this safety feature has saved millions of lives worldwide.
- **Pacemaker:** Created by Rune Elmqvist in 1958, this device has transformed cardiac care.

Modern Innovations

Sweden continues to be a leader in technological advancement, particularly in sustainable and transformative solutions. Here are some recent progressions:

Hybrit and Green Steel

Hybrit: A groundbreaking initiative aimed at producing fossil-free steel. This project, a collaboration between SSAB, LKAB, and Vattenfall, uses hydrogen instead of coal in the steelmaking process, significantly reducing carbon emissions. The technology has the potential to cut Sweden's CO₂ emissions by 10%, paving the way for a greener future.

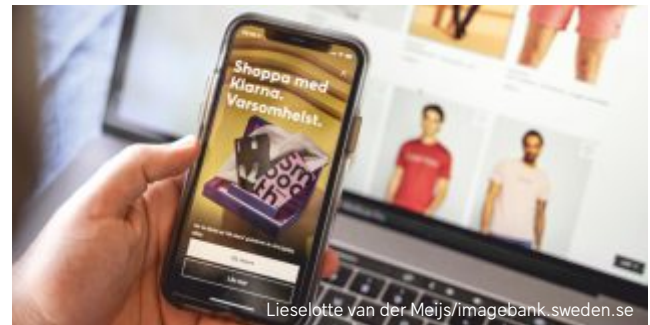

Tech Unicorns

Sweden is home to a vibrant startup ecosystem, fostering companies that are making waves globally. Some notable tech companies include:

- **Klarna:** A fintech company providing innovative payment solutions.
- **Spotify:** Revolutionized music streaming and continues to be a global leader.
- **Truecaller:** Offers caller identification and spam blocking services.
- **King:** The company behind the popular game Candy Crush Saga.

Other Innovations

Innovations spanning a diverse range of categories – from sustainable food alternatives and life-saving emergency technologies to groundbreaking medical processes and smart infrastructure solutions, each represents a unique blend of technological, product, process, or service innovation.

- **Oat Milk:** Developed by Oatly, oat milk has become a popular dairy alternative worldwide, contributing to sustainable food practices.
- **Life-saving Drones:** Swedish companies have developed drones equipped with defibrillators to provide rapid assistance in medical emergencies.
- **Cellink's 3D Bioprinting:** Cellink uses nanocellulose to 3D print complex models like livers and pancreas, advancing medical research and treatment.
- **Aqua Robur's Wireless Communication Equipment:** This technology allows water utilities to detect and measure water leakage efficiently, even in areas without electricity.

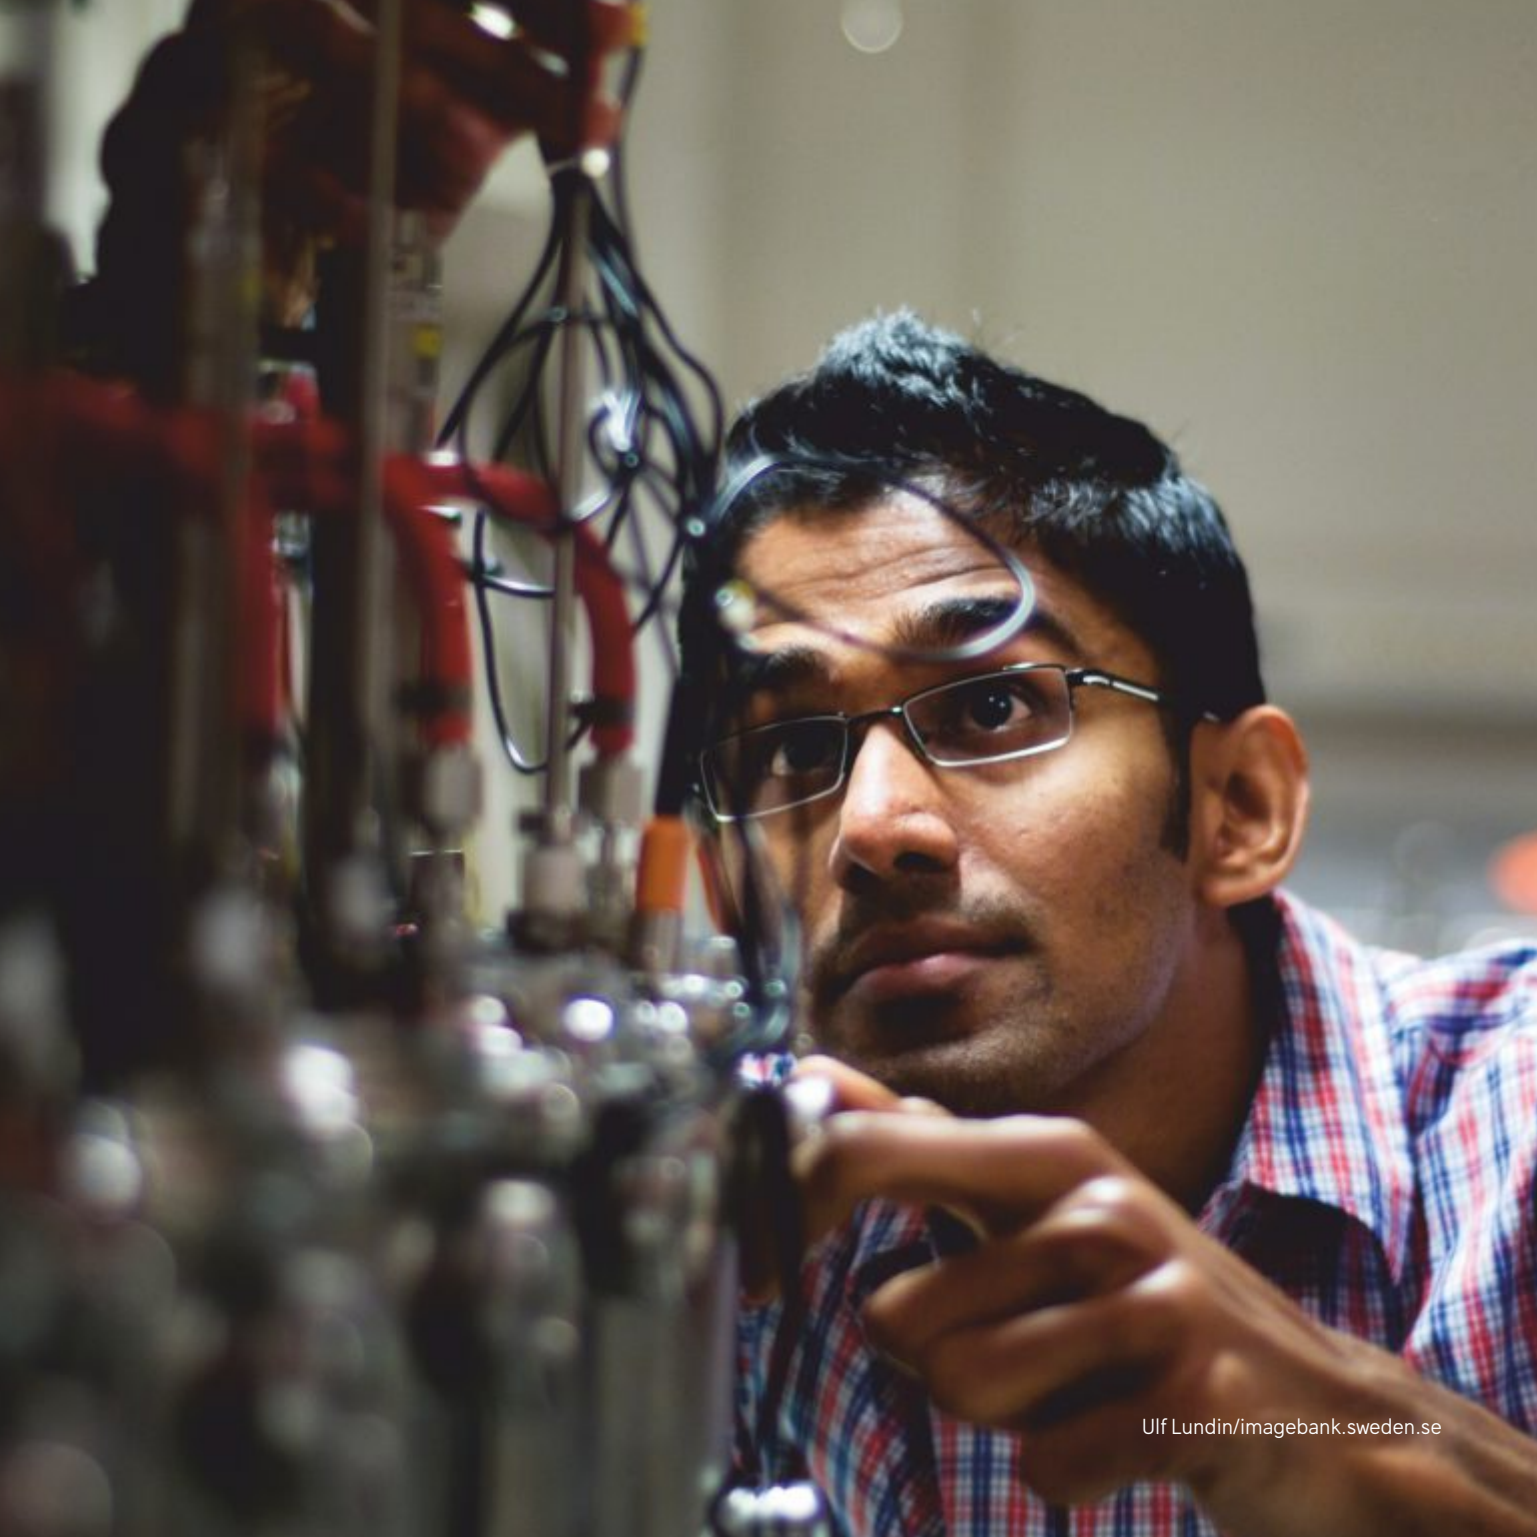

How does Sweden do it

Several factors contribute to Sweden's success in innovation:

- **Education:** Sweden places a strong emphasis on education, particularly in STEM fields, fostering a knowledgeable and skilled workforce.
- **Collaborative Culture:** The Swedish culture encourages collaboration and teamwork, which is essential for innovation.
- **Investment in R&D:** Sweden invests heavily in research and development, providing the necessary resources for innovative projects.
- **Government Support:** Policies and initiatives that support startups and sustainable practices help drive innovation.

Whether it's historical inventions like the pacemaker or modern breakthroughs like Hybrit, Sweden continues to remain at the forefront of global innovation make significant contributions to the world.

Swedish Foreign Minister, Maria Stenergard meeting with Indian Minister of Commerce & Industry, Piyush Goyal

STRATEGIC AREAS

FLAGSHIP INITIATIVES

Energy

Sweden is a leading renewable energy nation with ambitious goals to produce 100% electricity from renewable sources by 2040. Ranked first in the World Economic Forum's Energy Transition Index for 2025, Sweden was one of the first countries in the world with nearly all households electrified in 1960. Almost 99% of power produced in the country comes from renewable, biofuels and nuclear sources, thereby making it fossil free.

In 2010, Sweden and India signed a Memorandum of Understanding in the area of renewable energy. The country shares a common objective with India on the need for innovation and entrepreneurship to build domestic competitiveness and address the growing demands in an energy constrained world facing climate-related challenges. Both countries have been dedicatedly working together to enhance collaboration in the energy sector including involvement in initiatives such as the International Solar Alliance (ISA) and R&D projects through partnerships with international organizations. Multiple bilateral initiatives and programs have been launched between both countries to enhance cooperation and co-creation which include:

1. India-Sweden Innovations' Accelerator:

Ongoing since 2013, the program aims at introduction of Swedish companies with innovative solutions in energy and sustainability in India. Supported by the Swedish Energy Agency in partnership with Business Sweden and Confederation of Indian Industries – Green Business Centre, the program has introduced

75+ Swedish cleantech companies facilitating over 250 projects ranging from pilots to full scale commercial projects, since its inception.

2. India-Sweden Industry Transition

Partnership: Launched under the umbrella of LeadIT in COP 28, this Partnership focuses on consultations at government-to-government level towards accelerated decarbonisation of steel and cement sectors.

3. India-Sweden Green Transition Partnership:

Accelerating the pace of green transition across hard to abate sectors including automotive, petrochemicals, power generation, etc. Launched in 2022, the partnership focuses on working together with leading Swedish and Indian companies by sharing expertise and industry knowledge through technical workshops and dedicated meetings.

4. India-Sweden Green Hydrogen Cluster:

Introduced in 2023, cluster focuses on accelerating development of India's green hydrogen ecosystem through technology exchange, capacity building, and policy advancements from Sweden.

Healthcare & Life Sciences

Sweden is recognised for having one of the best, sophisticated public health systems globally, spending approximately 11% of its Gross Domestic Product (GDP) on health and medical services. Swedish life sciences exports constitute 10% of the nation's total exports, making Sweden a global leader in health innovation.

India and Sweden have been collaborating successfully in the healthcare sector since 2009. This collaboration spans across various areas, including non-communicable diseases, geriatric care, and antimicrobial resistance (AMR). The partnership has led to advancements in technology, support for startup incubation, and the upskilling of healthcare personnel.

In 2020, AIIMS Delhi, AIIMS Jodhpur, and Business Sweden signed a tri-partite agreement to establish the India-Sweden Healthcare Innovation Centre (ISHIC). The Centre's aim was to innovate public healthcare delivery in India through three pillars of innovation: patient pathways, startup incubation, and skills & capacity building. It has provided Swedish firms opportunities to pilot, test, and collaborate in the Indian market.

Following the success of ISHIC, the Swedish Healthcare Consortium was launched in 2023 by Team Sweden in India (Embassy of Sweden, Business

Sweden and Swedish business community). The Consortium/ platform brings together Swedish companies under one umbrella to consolidate efforts towards concrete business opportunities within greenfield and brownfield hospital projects in India. Since its inception, two phases of the platform have been completed involving technical workshops and meetings with decision makers from premier government institutes, EPC companies, private hospital groups in India along with participating Swedish partners.

Swedish Healthcare Consortium in India

New Materials

Swedish technologies are at the forefront in creating innovative solutions for the manufacturing environment. These expertise and solutions are widely recognized globally and also in the Indian environment across areas including 5G technologies, robotics process automation, electrification and digitization among others.

The Indian Government launched its self-reliant mission to promote manufacturing and mining in India for all critical products and raw materials in the year 2020. The focus of this mission is also to achieve this larger goal in a more sustainable manner to meet the climate goals of the country. This vision has created opportunities across multiple sectors including batteries, chemicals, semiconductors and mining. The focus of these opportunities is to drive sustainability and innovation into the ecosystems, which has a stronger synergy towards Sweden.

India-Sweden Mining platform

Launched in 2022, the India-Sweden Mining Platform is part of an intergovernmental cooperation between India and Sweden. The objective of the platform is to promote Sweden as a partner towards creating sustainable mines in India. Since then, the platform has collaborated with leading Indian mine operators both from the private and public side towards achieving their goals in sustainable mining. Over 10 pilot projects have been initiated through the platform with partner organisations in digitisation, electrification, automation and waste recycling.

India-Sweden Semiconductor Platform

India is moving fast to set-up a domestic semiconductor ecosystem from design to manufacturing to OSAT facilities. This is driven by governmental support and increasing demand from the end user industries and the existing R&D facilities in design.

The India-Sweden Semiconductor Platform enables exchange of best practices between India and Sweden thereby strengthening the collaboration between the two countries. The platform, an initiative of Team Sweden, was formally inaugurated in 2023 in the presence of former State Secretary to Minister for Business, Industry, and Innovation, Mr. Håkan Jevrell and has since organized focused workshops and discussions on critical aspects in semiconductor manufacturing.

New Wave Industries

(AI, Digitalisation & Fintech)

Sweden has made a strong commitment to apply new-age technologies such as 5G/6G, AI, XR, Cloud and IOT drawing on its strong R&D capabilities, innovation-friendly policies, and substantial government support. The contribution of the Information and Communication Technology (ICT) industry to Sweden's economy, as a share of GDP, is among the highest in the world.

Stockholm, referred to as the “Unicorn Factory,” has emerged as a hotspot for tech startups and is home to ~1,100 financial enterprises. The country's commitment to digitalisation, and financial innovation has created an environment where start-up and scale-up companies can expand on a global scale.

The country, with its firm footing in advanced manufacturing, aerospace engineering, transport systems and high-tech robotics, complements India's growing digital economy.

Large Swedish companies including Atlas Copco, Ericsson, Volvo Group, IKEA, SKF, Saab, ABB and Epiroc have set up capability and technology centers in India.

Ericsson has three R&D centers in India focussing on 5G / 6G research & product development, autonomous telecom networks & AI Innovation & incubation. Saab, a leader in aerospace and defence, has been integrating advanced

technologies such as AI into its offerings in India. Similarly, ABB is leveraging AI for its supply chain operations in India. Other well established Swedish companies such as Assa Abloy, Hexagon and Consat are also penetrating deeper into the India market through usage of AI and IoT enabled solutions.

At the G2G level, several initiatives have been developed to foster growth in digital technologies. These include the India-Sweden High-Level Dialogue through which short and long-term projects in strategic areas such as digital health and AI have been implemented and the Industrial R&D Program which addresses shared challenges around smart cities, clean technologies, digitalization, and IoT. This program is co-funded by India's Department of Science & Technology (DST) and Sweden's innovation agency, Vinnova.

Space & Aviation

Space is a strategic sector for both India and Sweden with historic relations spanning across almost four decades when the two countries signed a Memorandum of Understanding (MoU) in 1986. This cooperation was reaffirmed as a collaboration area in the Sweden-India Joint Action Plan agreed upon by former Prime Minister Stefan Löfven and Prime Minister Narendra Modi in 2018.

Sweden is an emerging space nation and has 63 years of rich space journey starting its small steps in 1961 when Sweden launched its first sounding rocket. In 2024, a landmark year for Sweden and India, Business Sweden, together with the Embassy of Sweden, Swedish Space Agency, ISRO, and IN-Space, organised the largest ever Sweden-India Space Industry Day to present Swedish technologies and innovation to support India's space journey and growth for next decades and Team Sweden continues to pursue this.

The cooperation continues with ISRO's Space Science Mission to Venus making way to accommodate scientific instrument developed by the Swedish Institute of Space Physics (IRF). An MoU between ISRO and IRF is scheduled to be signed for this cooperation in 2025.

On the aviation front, Sweden is globally recognized as a pioneer in smart and sustainable aviation. With over 60 airports ensuring robust domestic and international connectivity, the country has made significant strides in reducing its environmental footprint. Swedavia AB, the state-owned airport

operator, achieved zero fossil carbon-dioxide emissions across its operations in 2020. Around 80 Swedish companies are actively contributing across the aviation value chain, offering cutting-edge solutions in infrastructure, digitalization, and green technologies.

In recent years, Sweden has emerged as a trusted partner in supporting India's aviation transformation. In 2022, LFV (Swedish Air Navigation Services) and the Airports Authority of India (AAI) signed a Memorandum of Understanding (MoU) to collaborate in strategic areas such as air traffic management & control, airport design & infrastructure, digitalization & automation and sustainability and energy efficiency.

This commitment reflects a shared vision of building future-ready, efficient, and environmentally responsible airports. One of the initiatives under this partnership is the India-Sweden Airports Platform which was launched in August 2022. This was followed by a delegation to Wings India in 2024 where 7 Swedish companies participated to showcase Swedish innovation to support India's aviation ambitions, while also opening new opportunities for bilateral trade, technology transfer, and sustainable development.

FINANCING

The Swedish Export Credit System

Two Swedish government backed organisations

To facilitate and promote exports and the internationalisation and competitiveness of Swedish industry, Sweden offers a government backed export credit system.

The combined offer facilitates the financing of transactions with Swedish exporting companies and has strong benefits for all parties involved.

EKN, The Swedish Export Credit Agency, offers guarantees for payments and financing in export transactions. The guarantees give international buyers attractive financing terms, while lowering the risk for Swedish exporting companies and commercial banks.

SEK, The Swedish Export Credit Corporation, provides long term funding for Swedish export related transactions. Enjoying a high credit rating, SEK can offer favourable loans to facilitate export deals.

How to finance a Swedish export contract

Export transactions often involve large contracts and buyers that require long repayment periods. A common form of financing is an export credit provided by a commercial bank – a buyer's credit.

Financing of a large Swedish export contract usually involves a commercial bank as the arranger. The bank, or a group of banks, arranges and administers a loan to the buyer in the export contract. EKN is the guarantor, taking the repayment risk with a small portion of the risk retained by the arranging bank. When the borrower is a sovereign the cover is 100%. SEK can provide funding, and also sometimes assume the role as arranger, usually jointly with one or more banks. See an example below.

Commercial Bank

+

EKN

+

SEK

ARRANGES LOAN

- LOAN STRUCTURING & DOCUMENTATION
- RETAIN RESIDUAL RISK, IF ANY, ON THE BORROWER

GUARANTEES PAYMENT

- SWEDEN RATED AAA
- COVERS 95% OF THE RISK ON THE BORROWER
- 100% COVER IF SOVEREIGN BORROWER/GUARANTEE

PROVIDES FUNDING

- OFFERS FIXED (STATE SUPPORTED CIRR*) OR FLOATING RATE IN DIFFERENT CURRENCIES
- CAN RETAIN RESIDUAL RISK

* The Commercial Interest Reference Rate, CIRR, is a state-supported interest rate administered by SEK. It allows exporting companies to offer their customers funding at a favourable fixed interest rate.

Benefits

The exporting company receives upfront payment and can still offer customers competitive financing.

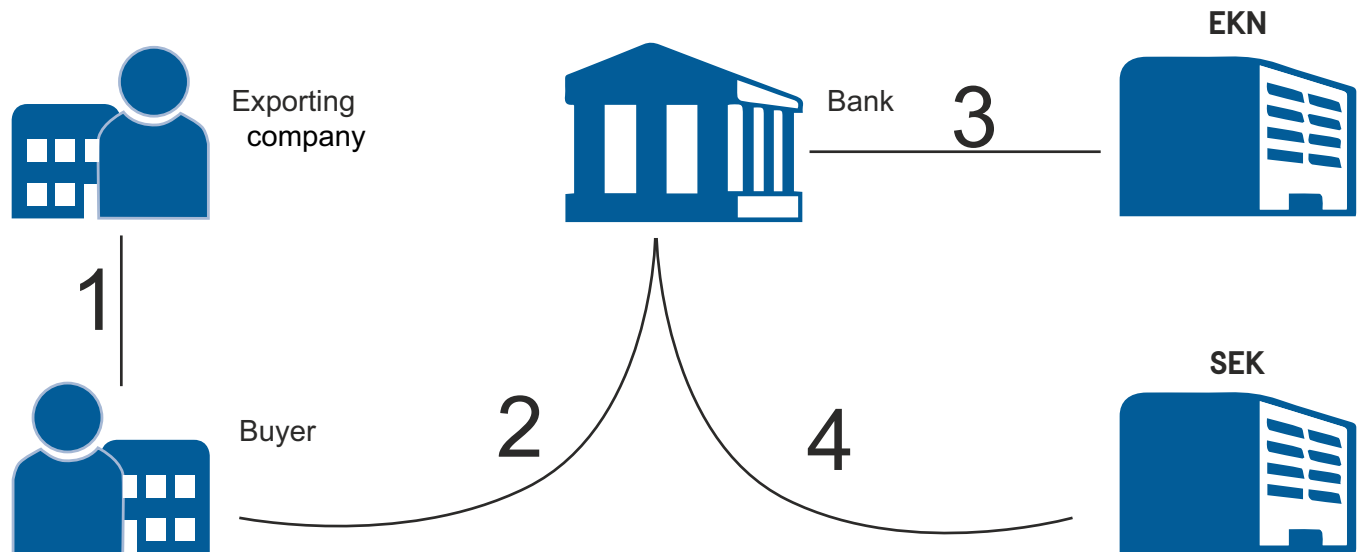

The buyer receives access to attractive financing with long tenors. An export credit also diversifies the buyer's loan portfolio, and reduces the use of bank credit limits.

The commercial bank minimises its exposure to risk and capital loss thanks to the EKN guarantee. The bank also gains access to attractive funding options with SEK, which improves their balance sheet.

With an EKN guarantee, **the commercial bank** can turn to SEK for optional funding of the loan. The loan is assigned to SEK together with the rights under the EKN guarantee. The loan is now on SEK's balance sheet, while the bank retains the 5 % non-covered portion, if any.

How does it work?

To ensure the best conditions for all parties involved it is very important for the exporter and bank to contact EKN and SEK at an early stage. This is to enable structuring of the business agreements regarding securities, capital structure, and being OECD-compliant. In our environmental and social due diligence, EKN and SEK comply with international standards.

1. The exporting company and the buyer sign a sales contract. Payment is to be made at delivery, or with a short credit period.
2. A bank signs a loan agreement with the buyer.
3. The bank applies for a guarantee – preferably before the contract is signed, and receives an offer from EKN. EKN normally covers 95% of the loan. The bank notifies EKN of disbursements and receives the guarantee. This is when the premium is paid.
4. If the bank is looking for funding they will have contacted SEK and received an offer, before signing the contract. The bank will then assign the loan as well as the rights under the EKN guarantee to SEK. The bank

retains the 5% risk share on the borrower as well as their obligations to EKN, and administers the loan. If the borrower fails to pay according to the loan agreement, EKN will pay compensation to SEK.

Absortech India Private Limited

Absortech specializes in preventing moisture damage during transport, safeguarding cargo and brand. Absortech's mission is to protect products, enhance business savings, and reduce the environmental impact of global logistics and supply chain operations.

As pioneers in moisture damage prevention since 1996 and headquartered in Sweden, Absortech is driving innovation in desiccant technology. Designing and manufacturing a wide range of calcium chloride-based desiccants to meet diverse industry needs, Absortech's holistic approach, Peace of Moisture Mind®, goes beyond products.

Absortech's commitment is in taking responsibility for the impact on the society, the economy, and the environment by offering sustainable, efficient, and reliable moisture damage prevention solutions.
