Foreword

Sweden Makes in India!

Ties between Sweden and India continue to grow. We have intensified relations in a range of areas of mutual benefit and an increasing exchange of high-level visits. The Make in India Week in Mumbai in 2016 saw the creation of a platform for business leaders, the India Sweden Business Leader's Round Table. A Sweden - India Joint Action Plan as well as a Joint Declaration on Sweden-India Innovation Partnership for a Sustainable Future were signed at the highest level during the visit of Prime Minister Modi to Sweden in 2018

Swedish companies have been Making in India for many decades, and today create 200,000 jobs in direct employment and more than 1,6 million indirectly. We see companies

Ulrika Sundberg

contributing to India's development in several areas, such as energy/environment and smart cities, ICT and digitalization, healthcare and life sciences as well as retail. Sweden believes in circular economy and knowledgebased societies, powered by innovation and sustainability while investing in people. India and Sweden are ideal partners in building sustainable business for the future.

The eighth edition of the Sweden - India Business Guide highlights the core values and key competencies that Sweden offers India in a strategic partnership. We hope that this Guide can be part of your toolbox for increasing and deepening business relations between India and Sweden!

TEAM SWEDEN

Embassy of Sweden

The Embassy of Sweden in New Delhi represents the Swedish Government in India and is responsible for strengthening contacts between Sweden and India within a range of areas in both the public and private sector. It undertakes a wide variety of activities which aim to promote political, economic and cultural ties between Sweden and India. The Embassy promotes trade and economic cooperation with particular focus on business promotion. The Embassy is also responsible for spreading information about Sweden in India. It provides support to Swedish citizens in consular matters and issues visas and permits for Indian and third country national citizens. The Ambassador in New Delhi is also accredited to Sri Lanka, Nepal, Bhutan and Maldives.

Consulate General of Sweden

Established in September 2012, the jurisdiction of the Swedish Consulate General covers Maharashtra, Gujarat and Goa – an area comprising 173 million people. The Consulate's major role in India is to develop bilateral trade relations and grow finer insights into the Indian system through different institutions and representatives from varied industries and the regional governments. Its prime aim is to broaden and deepen this coalition with special emphasis on trade and investments. It also focuses on spreading information on Swedish inventions, innovations, technologies and services and how they can benefit India. The Consulate General aims at increasing knowledge about Sweden in India and furthers cultural exchange. It works closely with the Embassy of Sweden in Delhi, Business Sweden and the Swedish Chamber of Commerce under the umbrella of Team Sweden to help liaise and increase business contacts between Swedish and Indian companies within strategic sectors, such as Smart cities, Climate change, Energy & Environmental Technology, Health Care & Life Science and ICT.

Business Sweden - The Swedish Trade & Invest Council

Business Sweden's purpose is to help every Swedish company to reach their full international potential and companies abroad to reach their full potential by investing in Sweden. We offer our customers strategic advice and hands-on support. Business Sweden is owned by the Swedish Government and the Swedish Industry. The shared ownership provides access to contacts and networks at all levels. Business Sweden was founded on the first of January, 2013, by a merger of the Swedish Trade Council (Exportrådet) and Invest Sweden. Business Sweden was established in India in 1996. We are now a team of 30 business consultants, with offices located in New Delhi and Bangalore. Business Sweden has for the past twenty years played an active role in enhancing trade and investments between Sweden and India, which is especially strong in areas such as Smart Cities, Telecom, Power, Smart Manufacturing, Medtech, but also with an increased focus on consumer markets. Business Sweden acts as a dedicated business partner for Swedish companies in India by assessing the market, building strategies for market entry, growth and development as well as supporting in establishing business entities and teams.

Swedish Chamber of Commerce India

The Swedish Chamber of Commerce India is an organization for and by the Swedish companies in India. In close collaboration with companies we work on strategic questions to further the value proposition of Sweden and build meaningful, sustainable and successful businesses in India.

We provide catalytic platforms for collaborations, knowledge development, and sharing of experiences and best practices. The Chamber also gathers the collective voice of the Swedish business community on ease of doing business and the experience of India as a business destination. With Swedish companies present in the country for more than 100 years, the experience runs deep. Together we continue to tell the story of "Sambandh" that means relationship and connection in both Hindi and Swedish.

Sweden-India Joint Innovation Partnership

During the Prime Minister Modi's visit to Stockholm in April 2018, the governments of Sweden and India agreed to deepen our collaboration in the field of innovation through a strategic innovation partnership. The innovation partnership represents a step-change in India-Sweden science and innovation collaboration, underpinning our mutual commitment to drive prosperity and address global challenges such as climate change and sustainable development through innovation. The

partnership sets the framework for future cooperation to jointly tackle societal challenges including innovation driven challenges on cross sectoral issues with multistakeholder/agency participation from both countries. The partnership is based on the principles of cofunding, co-development and co-creation, towards mutual benefits, making full use of our complementary strengths.

- The partnership is intended to deepen the bilateral dialogue on innovation issues through increased cross-sectoral, cross-ministerial and crossagency cooperation, to discuss innovation from a system perspective.
- The partnership covers several areas, including smart cities, transportation and eMobility, energy, clean technologies, new materials, space, circular and bio-based economy, and health and life sciences.
- Sweden and India will cooperate to develop and implement joint innovation projects.
- Indian and Swedish enterprises and other key innovation players will work together to find solutions to common challenges and make use of each other's strengths.
- Sweden and India will cooperate on support to innovative start-ups, for example through exchanges between incubators.
- The two countries will also step up their collaboration regarding research infrastructure and test beds.
- The partnership will make it easier for Swedish companies to increase their knowledge of India's needs and strengthen the prospects for both new collaborations and new business opportunities.

The Ministry of Enterprise and Innovation in Sweden, together with the Ministry of Science and Technology in India (Department of Science and Technology and Department of Biotechnology) are the leading partners for developing collaboration within the partnership. The implementation of the innovation partnership will be supported by the Office of Science and Innovation at the Embassy of Sweden in New Delhi. As part of this partnership, the Government has tasked Vinnova (the government agency for innovation) with strengthening innovation cooperation between Sweden and India in the field of smart cities. The Government has allocated up to SEK 50 million (approx INR 40 crores) to Vinnova for this assignment up to the year 2021.

|4 - 15|

Sweden-India Joint Action Plan

With an aim to further promote bilateral cooperation and build a win-win partnership, the Prime Ministers of Sweden and India agreed upon a joint action plan (JAP) in Stockholm on 16-17 April 2018. In addition to the Joint Innovation Partnership, both countries agreed to take forward a wide range of initiatives in defence; trade and investment; counterterrorism; smart sustainable and renewable energy, smart cities; sustainable transport

including e-mobility and railways; women's empowerment and skill development; space and science; and healthcare and life sciences.

These priorities lie within existing agreements and collaborations between Sweden and India and will guide our work in the coming years, strengthening ties and building bridges between our two countries.

Clean air enables sustainable production

Do you want to boost profitability by making your operations as efficient as possible? Do you also need to meet high environmental standards and keep your employees safe from fumes and dust? At Nederman, we can help you on all counts. With 70 years of leading expertise from a wide variety of industries, we know what it takes to make your business clean, safe and compliant.

Nederman offers the widest range of products and clean air solutions for extraction and filtration of dust and particles, welding fumes, exhaust fumes, oil mist, gases, and combustible dust. We are present in many industries, such as welding, metalworking, composite machining, woodworking, vehicle services, process industry and energy. Covering the entire country, we are always close to help you maximize production efficiency, improve work environments and reduce environmental impact. We also fully support the Prime Minister's initiative Make

in India. That is why we have chosen to work with local sourcing, as it both boosts the local industry and benefits the environment. Both of these issues are part of our ongoing global sustainability efforts.

Contact us to learn how we can help you protect your people and products while safeguarding our planet.

NEFAB

1. Society

NEFAB strives to reduce carbon foot print of its customers by optimizing the packaging Solution through usage of optimum packaging material and optimization of packaging for different modes of transport. Thereby reducing the environmental impact & contributing to society for better tomorrow.

2. Creativity

With engineered complete packaging solutions and multi material engineering capability, NEFAB provides creative products to the customers. This ability of NEFAB is not only helpful to provide Environmentally Friendly packaging solutions, but also provides adequate protection to products being packed.

3. Innovation

Withmulti-material engineering & testing capability, NEFAB has designed an innovative product using

a combination of paper & plywood, utilizing their inherent strength, to replace wooden boxes, thereby reducing environmental impact.

4. Our Sustainability Concept

NEFAB wants to secure a place in a sustainable future society.

To do that, we are actively working in our operations to achieve sustainable development and manage our stakeholders' requirements and expectations.

Sustainability work is an important and integrated part of NEFAB's customer offering. A structured process leads to a favourable business climate that attracts skills, provides more efficient control and strengthens the brand.

Sustainability work also play a key role in NEFAB's competitiveness, paving the way for doing business with new customers who share the same values.

The sustainability work is governed by NEFAB's vision, core values and code of conduct as well as the policies established in relation to laws and regulations.

Our sustainability strategy is organized in three main areas: Supply Chain - Own backyard - Value proposition

Supply Chain: NEFAB will ensure sustainability throughout its Supply Chain

Own Back Yard: Sustainability shall be more clearly instilled into NEFAB's own operations and internal processes

Value Proposition: Sustainability will be an integrated part of NEFAB's customer offering

Our sustainability concept means:

- Careful use of resources
- Respect for future generations and stakeholders
- What we do today will impact tomorrow
- It is future oriented but close in time

Swedish-Indian Business History

Diplomatic relations between Sweden and India were established in 1948, the year after India became independent. However, business relations between the two nations date back further than that. The Swedish-Indian history can be viewed in three separate waves of development. The first wave of Swedish companies entered India in the beginning of the 20th Century, with pioneering companies like Ericsson, SKF, Swedish Match and ASEA (later to become ABB).

The second wave came after independence. In 1957, the Indian Prime Minister, Jawaharlal Nehru, visited his Swedish counterpart, Tage Erlander, and the two political leaders agreed that Sweden and India had a lot in common and would profit from collaboration. A large area of land was allocated

to Swedish companies in the city of Pune, which was a strategically good location considering the proximity to India's commercial centre in Mumbai. In the 1960-70s Pune became an important industrial hub, where Swedish companies like Alfa Laval, Tetra Pak, Sandvik and Atlas Copco were established.

The third wave of Swedish companies entered India during the 1980s and 1990s with among others Volvo Trucks & Buses and Perstorp. Companies with large purchasing organizations, such as IKEA and H&M, also started doing business in India. In the 2000s Volvo Cars and Scania established subsidiaries and were accompanied by an influx of small and medium sized companies, such as Systemair and Roxtec. to name a few.

Trade between the two countries has grown over the last decade and a steadily rising number of Swedish companies have established themselves in India. At present, we can see an embryo of a potential fourth wave of Swedish-Indian business development. Swedish companies are now not only sourcing from India, but also progressively establishing their global hubs here with R&D, sales and manufacturing etc. Moreover, there is an influx of fast-moving consumer companies finding their space in a developing Indian retail market.

Whilst Swedish companies have a 100 year long history in India, Indian companies have been establishing and investing in Sweden more recently, since the start of this millennium. The first foray was led by large IT companies with the

top tier companies such as TCS, Wipro, Infosys and L&T Infotech. A second and more decisive wave of IT companies commenced a decade later led by Mahindra-Satyam, and the acquisition by HCL Technologies of Volvo IT and its 900 employees. Indian investments in Sweden in other areas are evident in industrial sectors such as Bioeconomy with Aditya Birla Group's acquisition of Domsjö Fabriker in viscose fibre, and Bharat Forge in Kilsta in automotive.

Indian companies are searching for innovation and applied research in Sweden. To date there have been investments and collaborations within pharmaceuticals, material research and automotive technologies amongst others. Indian automotive companies are now expanding in the Swedish market through organic investments but also via acquisitions. For example Tata AutoComp Systems acquired Titan X while Sansera made an acquisition of MAPE. Furthermore Tata Technologies acquired Escenda for design and engineering services. Indian companies are now investing and expanding their footprint in Europe with Sweden as a gateway.

4000 people are currently employed by roughly 60 Indian companies in Sweden, while the number of employees directly or indirectly engaged in Swedish business is estimated to be 2-3 times higher. Sweden offers complimentary opportunities for Indian companies' ambitions, which is in line with Indian businesses increasingly global outlook.

Scania Commercial Vehicles India Pvt Ltd Plot No 64-86, 88-97, Narsapura, KIADB Industrial area, Narsapura Hobli District Kolar, Karnataka - 563133

CORE VALUES

Society

Sweden is consistently ranked as one of the most competitive economies in the world by the World Economic Forum and is open to international trade and investments. It is known for its rich natural resources, innovations, high-tech companies and caring society.

Modern Sweden is solidly founded on democracy and openness. Democratic principles shape not only the way the country is governed, but all levels in society – from preschool to the workplace. We also fly the flag for equality and transparency. The aim is to ensure that everyone enjoys the same opportunities, rights and obligations in all areas of life and hold the freedom to scrutinize how politicians and public agencies exercise their power.

Sweden's economic and social system, often referred to as the "Swedish Model", has lifted the country to one of the highest standards of living in the world. By combining a market economy with a strong public sector, a strong emphasis on freedom of expression and gender equality and an efficient welfare and social security system, Sweden ensures equality and financial security for each and every individual. Tax-financed education and health care contribute to making Sweden a role model for many other countries.

Swedish companies as well as Team Sweden tend to also "walk the talk" and apply these values at all levels. Corporate social responsibility means also applying core values to our business models as well as in our communication.

aulin/imagebank.sweden.se

Creativity

Sweden is a strong player in cultural and creative industries. Today, Sweden is one of the biggest streamers and exporters of music in the world, and has firmly established itself as one of the world's epicenters for developing and producing innovative, original, mass-market computer games. Sweden is also successful in fashion and design – with an increased focus on sustainability and circular economy – as well as literature, art and film.

These industries play an increasingly important role in the growth of the Swedish economy and are driving forces for innovation in other sectors of society and industry as well. Creative industries are encouraged to grow in an open society, where people have the space to experiment and express themselves freely. Swedish citizens are encouraged to take the chance to start a new business, which is

one of the key factors to the development of many successful Swedish companies.

The reasons behind the boom in Swedish cultural and creative industries are hard to pinpoint. Perhaps people have become more courageous in their expression, perhaps it is the effects of being a melting pot for different cultures or are people increasingly looking abroad for inspiration? Whatever the reason, Sweden is fast in adopting new trends and things have changed from the days of Bergman, Roxette and ABBA. Due to intense exchange between India and Sweden, India is increasingly becoming a source of influence and inspiration for Swedish artists and vice versa. This exchange of ideas is strengthening both sides in their quest for excellence.

Melker Dahlstran/imagebank.sweden.s

Innovation

A strong culture of innovation has propelled Sweden to the forefront of technological development. With a high number of patents per capita, Sweden is in the world's top 20, and Swedish creative thinking has resulted in some life-changing innovations spread around the world. The cardiac pacemaker has been implanted in more than 3.5 million people. The three-point auto seat belt is claimed to save a life every six minutes, and has been doing so for more than 50 years.

Both are Swedish inventions and part of a long list of innovations born in this country. Today, Sweden ranks as one of the most innovative countries in the world. Heavy investments in research, encouragement of critical thinking and entrepreneurship from an early age and openness to international influences are some of the key

factors behind this development. Swedish society is traditionally non-hierarchical and has a strong belief in the individual. Through flat organisations and collective decision-making, everyone is given the opportunity to speak and come up with ideas. This increases the probability of new inventions.

Education is also closely linked to innovation capacity. In Sweden, education is free and universities have a close collaboration with both the public and private sectors, setting the foundation for global Swedish companies.

Innovation is at the core of several of our activities in India and can be found both within our larger companies as well as forming the core of new small companies entering the Indian market. It is also a cross-cutting feature of our work as Team Sweden.

Sustainability

Sweden has a long history of international commitment in pursuing global cooperation in sustainable development. This has led to Sweden being in the forefront of developing new environmental technologies and sustainable system solutions. This includes renewable energy, green buildings, waste management, air and water treatment, sustainable fuels and battery-driven vehicles.

As the first country in the world to pass an environmental protection act, Sweden also hosted the first UN conference on the global environment in 1972. Since then, Sweden has managed to grow its economy substantially while reducing carbon emissions and limiting pollution. The Swedish green model means integrating business and sustainability. Sweden has emphasized that green growth can drive transition through technical innovation.

Sweden has invested heavily in the search for alternative energy sources. More than half of Sweden's national energy supply comes from renewable sources and Sweden aims at further reducing greenhouse gas emissions. Waste management, acid rain prevention, sustainable urban planning and recycling are other environmental areas in which Sweden has made progressive headway and challenged the status quo.

We bring sustainability into our work also here in India, with areas such as climate, renewable energy and urban transport very much in our focus. Increasingly we will also see resource management at both the society level with waste-to-energy solutions and the individual's responsibility for the next generation's living conditions.

A SOUND EFFECT ON PEOPLE

Saint-Gobain Ecophon AB - Managing the indoor Sound Environment in India

To help enhance the user well-being and performance, what do you think you need to consider when designing any indoor space?

Well, the first thing is that people will most likely perform a vast variety of activities, and this demands a specific attention to the acoustic quality!

There will at any given time be people talking on the phone, working in teams, having meetings, doing tasks in front of the computer or machines, that demand concentration or having brainstorming sessions. All these activities require their own acoustic solution. We call this 'Activity Based Acoustic Design'. Our solutions support the activity taking place and thus enhance people's job satisfaction, job performance and overall wellbeing. Quick Facts - A good acoustical environment can:

- Reduce adrenaline levels by 30%
- Improve task motivation by 66%

- Increase performance during tasks that require concentration by up to 50%
- Improve mental arithmetic performance by 20%

At Ecophon, our approach is to take the human perception into account and to work with most relevant acoustic parameters, which can help us create a comfortable acoustic environment. An interior environment with controlled sound levels and reduced disturbances, improves the company's popularity as a workplace. This in turn, can help them attract and retain a talented workforce in the long run!

If you have a built space with an acoustics challenge, or are planning a new project and would like to avoid sound quality related issues, please contact – Concept Development manager (India) – Manit Ramaiya at manit.ramaiya@saint-gobain.com or write back to us on EcophonIndia@saint-gobain.com

About Ecophon Group:

Ecophon Group develops, manufactures and markets acoustic products and systems for ceilings and walls. Used all over the world, our solutions meet the growing demand for good acoustics with the focus on offices, education, and health care premises. Ecophon contributes to a better working environment— wherever people work and communicate. The company is based in Hyllinge in Sweden, and it's a part of the global Saint-Gobain Group

Pioneers in thermal imaging, FLIR was founded in 1978, originally providing infrared imaging systems that were installed on vehicles for use in conducting energy audits. Today FLIR's advanced systems and components are used for a wide variety of thermal imaging applications including measurement, and assessment of thermal energy, gases, and other environmental elements for industrial, commercial, and scientific applications. The Instruments segment provides devices that image, measure, and assess thermal energy, gases, and other environmental elements for industrial, commercial, and scientific applications under the FLIR and Extech brands.

FLIR's products improve the way people interact with the world around them, enhance public safety and well-being, increase energy efficiency, and enable healthy and entertained communities.

At FLIR we provide superpower vision, helping people around the world save lives, protect the environment, and enhance productivity. We're building more than innovative technologies; we're striving to build a more sustainable, more efficient, safer future.

THEMES

Smart Cities

The United Nations projects that India's urbanisation rate will rise to 42 per cent by 2035, lifting the urban population from 64 million in 1950 to 640 million. Sweden and Swedish companies are known for their sustainable approach - not least when it comes to urban development. There is a great match between Swedish solutions and Indian cities' needs.

During the State visit by the Indian President Mukherjee to Sweden in June 2015, a Memorandum of Understanding (MoU) was signed with the aim to "promote bilateral cooperation between the Participants in the field of sustainable urban development", and create a foundation to further develop the cooperation between the two countries. Two meetings of the Joint Working Group have been held since.

During Indian Prime Minister Narendra Modi's visit to Stockholm in April 2018, India and Sweden signed a Joint Declaration on Innovation Partnership for a Sustainable Future as well as a Joint Action Plan to promote further bilateral cooperation. Smart cities, sustainable transport and waste to energy

are highlighted as specific areas in this regard.

There is a vast potential for future bilateral cooperation and business opportunities focusing, inter alia, on waste to energy, sustainable transport, connectivity and water, through the following platforms and initiatives:

- The Sweden India Smart Cities Platform promotes smart urban solutions from Sweden for the Indian market. The platform companies' products and services have been customised for the Indian market and are scalable for small and large city solutions.
- The Association of Swedish Engineering Industries has entered a cooperation with the Confederation of Indian Industries with an aim to promote Swedish companies' contribution in Indian Smart City projects.
- Smart City Sweden is the national export and investment platform, welcoming public and private stakeholders - including from India - to experience Swedish smart and sustainable city solutions.

Energy

Energy is a recurrent key area in the bilateral cooperation between India and Sweden. A Memorandum of Understanding (MoU) was signed in 2010 in the area of renewable energy cooperation. The Joint Action Plan signed by prime ministers Narendra Modi and Stefan Löfven in April 2018 reconfirms smart, sustainable and renewable energy as areas of mutual interest for further collaboration. Smart grid technologies and renewable integration are highlighted specifically in this regard.

The Joint Action Plan also stipulates an aim to expand research, innovation and business cooperation on new innovative energy technologies through the India-Sweden Innovations' Accelerator (ISIA), focusing on technologies to utilise renewable energy and energy efficiency. The objective of the program is to develop and provide platforms for joint innovation, research, development and deployment, which answer to shared needs and are of mutual benefit. ISIA is based on cooperation between Business Sweden and the Swedish Energy Agency

with the Confederation of Indian Industries (CII) as the main Indian partner. The program focuses on preparing and implementing customised market entry plans for the participating Swedish SMEs from various segments of clean energy and energy efficiency. The program runs in two year cycles, with 5-6 companies joining the platform on a biannual basis. Till date, the program has resulted in successful introduction of over 30 SMEs including Cleanmotion, FOV Biogas, Regin AB, Metrum AB, World Thermal Services and PPAM Solkraft. Under the platform the following activities, amongst others, are conducted:

- Customised delegations to India
- Development of market entry plan for Swedish companies under the Steps to Export Program
- Workshops followed by matchmaking with Indian public and private stakeholders
- Qualified B2B meetings with potential customers, partners, distributors, etc.

Healthcare

On completion of ten years of Memorandum of Understanding on cooperation in Health, 2019 is commemorated as Sweden-India Health Year. Several collaborations of mutual interests are on-going between public agencies and institutes, and the private sector and the two countries have further developed plans to enhance cooperation in new areas and with new partners and states.

The past ten years has seen collaborations especially in the areas of infection control, elderly care, lifestyle diseases, maternal and child health, and skill development. While these will continue

and expand, new areas such as digital health, innovations and artificial intelligence are being discoursed. For example, built on an active interplay between government, academia and private enterprise, an open innovation challenge UNNATI Healthcare 2.0 has been set up in collaboration with AGNIi and Atal Innovation Mission-NITI Aayog with an aim to create an ecosystem that fosters holistic disease management, reduces healthcare burden and saves lives through affordable and accessible early screening and efficient patient management.

Gender

Sweden has the world's first feminist government and in October 2014, Sweden became the first country in the world to launch a feminist foreign policy. This means applying a systematic gender equality perspective throughout the whole foreign policy agenda. Gender equality is an objective in itself, but it is also essential for achieving the Government's other overall objectives, such as peace, security and sustainable development. These values are promoted in our work in India as well.

Eight out of ten Swedish companies in India work actively with gender related questions, but so far only 20% of the employees are women. We still have a long journey ahead. The approach is based on the knowledge that business leaders can improve the equality in their companies, if they walk the talk.

Swedish companies work with strategic recruitment, active mentorship and leadership development to increase the number of women in their workforce, especially in leadership positions. Policies to give equal opportunities and rights as well as ensuring equality of choice, such as replacing the gender-specific maternity leave with parental leave, are being implemented.

When women participate in the labour market their economic empowerment increases, and a society's economic growth increases. Society also develops, since women, more than men, invest their income in the local society and in children's health and education. It is therefore not only right but also socially smart to invest in women's economic empowerment.

Skills

India's growth is impressive. It is a young nation with nearly 12,000,000 people entering the labour market annually. This is a great possibility, but also a challenge. Equipping men and women with skills that lead to employment is important.

Swedish companies in India build skills throughout value chains. Seven out of ten companies equip people within the area of their business operations, at suppliers or customers, or in community development programs. This has been part of our commitment to India for a long time.

We believe a key contribution we can make is to enable women to enter the organised job sector. Research shows that less than a quarter of the total workforce in the formal economy is made up by women. If women participated on similar terms as men, India would increase its GDP with 60% (2.9 trillion USD) 2025.

India's future is also in entrepreneurs, alternative occupations and in micro-grids of local economies. Women's ability and capacity in this sphere will, when released, create synergistic effects on value chains, communities and society.

We are strong proponents of public-private partnerships. We believe in combining forces to build sustainable eco-systems. It is about us working together for our future.

DeLaval - We Live Milk

India is one of the largest producer of milk in the world. However most of its milk is produced by small farmer families in remote villages. While men in these families have been concentrating on agriculture the dairy farming has been mainly focused upon by female member of the family. One of the toughest task in dairy farming has been hand milking, this also had a lot of pain and frustration for female farmers in the society.

DeLaval has worked extensively with female farmers to support and improve on this social fabric and have introduced mechanisation for milking thus providing them relief and comfort from the pain of hand milking. DeLaval, initiated awareness and

education process through demonstration of these units from village to village and by communicating its advantage for female farmers and milk productivity. After seeing these demonstration the farmers used to get convinced about its benefit for the family and have adopted mechanisation much faster than earlier. These rural campaigns have provided female farmers the comfort and better social standing compared to earlier situation with hand milking.

With thrust of producing clean & untouched milk to improve milk quality and to address increasing demand for commercial dairy farming, DeLaval in India works closely with farmers to provide education and training on practices and protocols for modern ways of dairy farming. DeLaval conducts courses at different locations to educate farmers on improving productivity and milk quality while addressing cow comfort and cow hygiene.

PARTNERS

India Sweden Business Leaders' Roundtable - ISBLRT

ISBLRT is a high-level platform for business leaders from Sweden and India. The platform was welcomed by the Prime Ministers in the Joint Statement from their meeting in Mumbai in February 2015. The aim is to identify joint challenges in the fields of research, innovation, investments, financing, trade, business, industrialisation and regulatory issues which need to be addressed and to forge a strong and durable relationship between the two countries. This forum of business leaders would be able to identify collaborations, draw upon best practices and also advise political leadership on both sides, on the way forward in order to develop our bilateral relations.

ISBLRT-members are mainly CEOs and Chairpersons of multinational companies from both countries. Heads of reputed academic institutions can be invited separately to be members of ISBLRT. ISBLRT is divided in four working groups: Smart City, Digitisation, Defence and Skill India.

Co-chairs are Mr Marcus Wallenberg from Sweden and Mr Baba Kalyani from India. ISBLRT secretariats are Sweden-India Business Council and Confederation of Indian Industries. In India. the Department of Industrial Policy and Promotion, DIPP, is the governing body. ISBLRTs set-up ensures direct communication to the political and business leadership on both sides.

Team Sweden India

Team Sweden India has also been established in The Swedish State Secretary for Trade is chair Stockholm as one of three highly prioritized market groups. The group will focus on cooperation and coordination between public and private sector actors active in India in order to create conditions and synergies favourable to the promotion of trade and investment flows between Sweden and India.

of Team Sweden and key members include the Ministry for Foreign Affairs, other government offices and agencies, Business Sweden, Sweden India Business Council. The Association of Swedish Engineering Industries and many more.
