

## UNFPA: Liberia National Statistics

	<b>Implementing partner(s)</b>	United Nations Population Fund (UNFPA)
	<b>Location</b>	Nationwide
	<b>Agreement period</b>	2018-2022
	<b>Budget total</b>	37 000 000 SEK

### Overview and objectives

A population census is the total process of collecting, compiling, evaluating, analysing, publishing and disseminating demographic, economic and social data for all persons in a delimited territory or country at a specified time. It is the largest data collection exercise in a country. It covers the whole country and provides information on every person within its borders, from the newly born babies to the oldest person as well as for nationals and non-nationals. In developing countries like Liberia, decennial census-taking is the most important source of information for general development planning. Because of this, the Swedish Embassy contributes to the next Liberia Population and Housing Census (pledged for 2021) through United Nations Population Fund as the executing agreement partner. A successfully completed census exercise will lead to higher levels of government effectiveness through evidence-based policy making, development, economic and governance planning, monitoring and evaluation.

### Activities

UNFPA will provide technical support along with a few other development partners: USAID, EU, the World Bank, to the main implementing partner: The Liberia Institute of Statistics and Geo-Information Services (LISGIS), The "Statistics House", as it is referred to, functions as a producer and publisher of national population and related socio-economic data. It is the only legally clothed entity to conduct such Government project.

The objective of the 2021 Liberia Population and Housing Census is to contribute to the improvement of quality of life of the people by providing the Government and other stakeholders with relevant, reliable, enough and timely social, demographic and economic data and information for development planning, policy formulation and service delivery as well as for monitoring and evaluation of development program and plans.

The main phases of this census project shall include: major procurement activities for logistics training of field staff and other preparatory activities, pilot cartography and field mapping, a pilot census, followed shortly by the presentation of preliminary results, a post-enumeration survey, computer data processing culmination in the presentation of the final statistics results detailed thematic data analyses and publication and wide dissemination of results.
